Proceedings of the 15th International Workshop on Deep-Inelastic Scattering and Related Subjects DIS, Günter Grindhammer, 2007 Deep Inelastic Scattering And Related Phenomena Giulio D'agostini, Andrea Nigro, 1997-03-15 This workshop is the fourth of a series initiated in Durham March 93 followed by Eilat February 94 and Paris April 95 The large interest and the great inflow of experimental data coming mainly from HERA are some of the reasons behind the decision to have this annual meeting presently the most important one for this area of research During the workshop experimental results and theoretical aspects have been reported on subjects which have been organised by working groups on 1 hadron structure functions 2 photoproduction and photon structure 3 diffractive interactions 4 hadronic final states 5 spin effects in lepton nucleon scattering 6 special session on theoretical advances While the contributions to the working groups offer hot material for specialists the reports by the conveners as well as other contributions to the plenary sessions offer to nonspecialists a complete overview of this research field Proceedings of the XXth International Workshop on Deep-Inelastic Scattering and Related Subjects Ian C. Proceedings of the 15th International Workshop on Deep-Inelastic Scattering and Related Subjects Günter Grindhammer, 2007 *Charm Production in Deep Inelastic Scattering* Sebastian Klein, 2011-10-09 The production of heavy quarks in high energy experiments offers a rich field to study both experimentally and theoretically Due to the additional quark mass the description of these processes in the framework of perturbative QCD is much more demanding than it is for those involving only massless partons In the last two decades a large amount of precision data has been collected by the deep inelastic HERA experiment In order to make full use of these data a more precise theoretical description of charm quark production in deep inelastic scattering is needed This work deals with the first calculation of fixed moments of the NNLO heavy flavor corrections to the proton structure function F_2 in the limit of a small charm quark mass The correct treatment of these terms will allow not only a more precise analysis of the HERA data but starting from there also a more precise determination of the parton distribution functions and the strong coupling constant which is an essential input for LHC physics The complexity of this calculation requires the application and development of technical and mathematical methods which are also explained here in detail **Physics With High Energy Colliders - Proceedings Of 22nd Ins**

International Symposium Sachie Yamada, T Ishii, 1995-04-26 Recent results from all types of high energy colliders $e e$ pp ep are presented from the view point of electroweak interaction and QCD Jet physics together with related phenomenological reviews Expected physics at future colliders both being built or planned are also discussed including $e e$ linear collider pp collider and heavy ion collider International Workshop on Deep Inelastic Scattering and Related Subjects, Eilat, Israel, 6-11 February 1994 Aharon Levy, 1994 **Strangeness and Spin in Fundamental Physics** M. theoretical and experimental investigation of the structure of free hadrons and hadrons in the nuclear medium as well as the structure of hadronic matter both at normal and extreme conditions The Volume is a useful update of the subject for theorists and experimentalists working in medium and high energy nuclear physics

Quarks And Colliders - Proceedings Of The Tenth Lake Louise Winter Institute Alan Astbury, Bruce A Campbell, Faqir C Khanna, James L Pinfold, 1996-08-22 The book originated in a series of lectures given at Liverpool in 2013 to a group that included postgraduate and undergraduate students and staff of the Physics Department They followed from two very successful lectures given to the undergraduate Physical Society It seemed that there was a very large interest among the students in investigating the foundations of physics in a way that was never done in physics courses and was not available in books or other outlets However the idea was to create a framework in which students and interested staff could develop their own thinking relative to the ideas in the lectures So it was important to create both conceptual and mathematical structures on the issues that are important at this level The book has the right sort of technical content to allow for this development but doesn't lose itself in excessive details The ideal use for this book would be on postgraduate courses where students would be encouraged to think about the foundations in a way that is well beyond the superficial However a course on aspects of this material would also be valuable at the undergraduate level where students could be stimulated into believing that creative thinking could solve the problems that emerge when we confront foundational problems

Selected Topics On Electroweak Interactions, Neutrinos And Qcd: A Review Of High Energy Colliders - Proceedings Of The Xxvith International Meeting On Fundamental Physics B Adeva, 1999-11-15 This volume provides a broad picture of the current understanding of electroweak and strong interactions according to most recent experimental results from some of the world's largest particle accelerators LEP II Tevatron HERA and SPS Special attention is given to CP violation the Higgs boson search and precision tests of the electroweak theory Although generally oriented the contributions are targeted at postgraduate students in particle physics

Masses of Fundamental Particles Maurice Lévy, 1997-10-31 The 1996 Cargèse Summer Institute on Frontiers in Particle Physics was organized by the Université Pierre et Marie Curie Paris M Levy the Ecole Normale Supérieure Paris J Iliopoulos the Katholieke Universiteit Leuven R Gastmans and the Université Catholique de Louvain J M Gerard which since 1975 have joined their efforts and worked in common It was the twelfth Summer Institute on High Energy Physics organized jointly at Cargèse by three of these universities The Standard Model for fundamental interactions is constructed on two essential ingredients the gauge symmetry and the mass generation mechanism Now that the gauge theory aspect has been finally established the new challenge for the young researchers in elementary particle physics is the understanding of the origin of the masses The standard Higgs mechanism is believed to be responsible for generating the masses of ALL fundamental particles Professor D Treille discussed the prospects for Higgs boson search and described the experimental determinations of the gauge boson masses The influence of the top quark mass

on electroweak processes has been emphasized by Professor J L Rosner while Professor M Neubert introduced the heavy quark effective theory which allows you to get rid of heavy quark masses The theoretical determinations of the light quark masses have been critically analyzed by Professor H Leutwyler Professor A Pich presented the various experimental tests on lepton universality and Professor R L MBssbauer reviewed our present knowledge on the neutrino masses Particle Physics At The Silver Jubilee Of Lomonosov Conferences - Proceedings Of The Eighteenth Lomonosov Conference On Elementary Particle Physics Alexander I Studenikin,2019-05-28 The volume of these proceedings is devoted to a wide variety of items both in theory and experiment of particle physics such as neutrino and astroparticle physics tests of standard model and beyond hadron physics gravitation and cosmology physics at the present and future accelerators
