Environmental Impacts & Risks of Deep-Sea Mining: Recommendations for Exploitation Regulations Ana Colaço, Marina R. Cunha, Annemiek Vink, Lenaick Menot, Miguel Caetano, Matthias Haeckel, 2025-09-24 After more than 20 years mining of mineral resources such as polymetallic nodules and massive sulfides in the deep sea is back on the agenda of many countries and companies in their quest for metals for the energy transition and high tech products In this course the past 10 years have seen an immense increase of exploration licenses issued by the International Seabed Authority ISA which administers and controls activities at the ocean floor beyond national jurisdiction generally termed the Area The seven pilot investors have renewed their exploration licenses in the Clarion Clipperton Zone CCZ for another five year term after which they will need to apply for an exploitation license or return their contracted claim Thus ISA is currently developing the regulatory framework for the exploitation of seafloor mineral resources which includes amongst several other issues legislation to ensure effective protection of the marine environment from harmful effects according to UNCLOS article 145 In order to support decision making for ISA s regulations the European project MiningImpact funded through the Joint Programming Initiative Healthy and Productive Seas and Oceans JPIO has carried out extensive environmental research in the eastern exploration license areas for polymetallic nodules in the CCZ At the heart of the project were two research cruises which established the environmental baselines in the German and Belgian license areas of the CCZ and independently monitored the first test of an industrial prototype nodule collector vehicle conducted by the Belgian company DEME GSR The monitoring program focused on studying the direct impacts in the trial areas and the dispersal and redeposition of the suspended sediment plume Topics covered during the monitoring included habitat characterization natural variability disturbance effects temporal evolution faunal communities and the development of techniques for rapid biodiversity assessment The MiningImpact project also initiated a restoration experiment with artificial hard substrates which aims at exploring the possibility to enable and accelerate the recolonization of areas affected by mining

Ecosystems of the Deep Oceans P.A. Tyler, 2003-03-27 This volume examines the deep sea ecosystem from a variety of perspectives The initial chapters examine the deep sea floor the deep pelagic environment and the more specialised chemosynthetic environments of hydrothermal vents and cold seeps These environments are examined from the perspective of the relationship of deep sea animals to their physico chemical environment Later chapters examine the biogeography of the main deep oceans Atlantic Pacific and Indian with particular attention to the downward flux of surface derived organic matter and how this drives the processes within the deep sea ecosystem The peripheral deep seas including the polar seas and the marginal deep seas inter alia the Mediterranean Red Caribbean and Okhotsk seas are explored in the same context The final chapters examine the processes occurring in the deep sea and include an analysis of why the deep sea has high species diversity how the fauna

respond to organic input and how species have adapted reproductive activity in the deep sea The volume concludes with an analysis of the anthropogenic impact on the deep sea *General Technical Report Southern Research Station* ,1995

Walker,1999-12-17 As the human population inexorably grows its cumulative impact on the Earth s resources is hard to ignore The ability of the Earth to support more humans is dependent on the ability of humans to manage natural resources wisely Because disturbance alters resource levels effective management requires understanding of the ecology of disturbance This book is the first to take a global approach to the description of both natural and anthropogenic disturbance regimes that physically impact the ground Natural

disturbances such as erosion volcanoes wind herbivory flooding and drought plus anthropogenic disturbances such as forestry grazing mining urbanization and military actions are considered Both disturbance impacts and the biotic recovery are addressed as well as the interactions of different types of disturbance Other chapters cover processes that are important to the understanding of disturbance of all types including soil processes nutrient cycles primary productivity succession animal behaviour and competition Humans react to disturbances by avoiding exacerbating or restoring them or by passing environmental legislation All of these issues are covered in this book Managers need better predictive models and robust data collections that help determine both site specific and generalized responses to disturbance Multiple disturbances have a complex effect on both physical and biotic processes as they interact This book provides a wealth of detail about the process of disturbance and recovery as well as a synthesis of the current state of knowledge about disturbance theory with extensive documentation
