Deep Sea Demersal Fish And Fisheries:

Deep-Sea Demersal Fish and Fisheries N.R. Merrett, R.L. Haedrich, 1997-10-31 This book deals with the bottom living fishes of the world's largest ecosystem the deep sea After a brief review of the oceanographic setting the diversity and ecology of this unique ichthyofauna are considered in detail The book goes on to deal explicitly with slope fisheries both developed and developing The interaction of the ecology of the species involved examples include orange roughy grenadier Greenland halibut and black scabbardfish with fishing practices and management regimes is then discussed An ecological framework for management is necessary for the resources to be sustainable it is argued rather than simply extending approaches used on the Continental Shelf to the deep sea **Deep Sea Demersal Fish and Fisheries** Arnold C. Long, 2009

Deep-Sea Fishes I. G. Priede, 2017-08-10 A comprehensive account of deep sea fishes covering evolution ecology and the potential threats posed by the growing fishing industry Catch documentation schemes for deep-sea fisheries in the ABNJ - Their value, and options for implementation Food and Agriculture Organization of the United Nations, 2019-04-15 This paper discusses the potential value of catch documentation schemes CDS in deep sea fisheries and the implementation aspects that have to be taken into account to ensure the effectiveness of this trade based tool to combat illegal unreported and unregulated IUU fishing The paper argues that the schemes are indeed useful for addressing IUU fishing practices known to occur in deep sea fisheries and that their adoption would improve compliance with fisheries management requirements Key infringements that could be directly detected and addressed include but are not limited to violations of closed areas harbouring protected vulnerable marine ecosystems in the deep ocean and quota overfishing The paper also establishes the notion that partial coverage of given species through a CDS at the level of regional fisheries management organizations is incongruous Given that most deep sea fisheries species have broad distributions that straddle many regional organizations the most suitable implementation model appears to be a centrally operated electronic CDS platform called a super CDS shared by a plurality of institutional and state players Oceanography and Marine Biology: An Annual Review: Volume 38 Margaret Barnes, R N Gibson, R.
