You will find in this book some valuable and reliable lessons about safe diving. The editors of and authors of this book are a cadre of scientists and physicians with broad experience and knowledge of diving physiology and decompression theory. As is often the case, it requires a group effort to succeed in advancing practical knowledge. The colloquialism the whole is greater than the sum of its parts is often true and the PHYPODE Research Group epitomizes this concept. By logically grouping the various elements of diving science and medicine with provocative food for thought sections, the text offers valuable lessons to those interested in the current state of diving. Despite nearly 170 years of research, the fundamental nature of decompression stress remains elusive. As is well outlined in this book, great advances have been made to the practical elements allowing for safe diving. Nonetheless, there are glaring voids of knowledge related to the nature of bubble nucleation, its consequences, and methods to ameliorate risk. The synergy exhibited in this text not only provides a foundation for what is known, it offers a glimpse of where research is taking us.

Professor Stephen R. Thom, Dept of Emergency Medicine, University of Maryland School of Medicine. This is a book for all diving fans who want to discover their passion through a scientific approach.

**EXCERPT: Decompression illnesses**

DCI or as they are called more scientifically, dysbaric disorders, represent a complex spectrum of pathophysiological conditions with a wide variety of signs and symptoms related to dissolved gas and its subsequent phase change.

1. 2. Any significant organic or functional dysfunction in individuals who have recently been exposed to a reduction in environmental pressure, i.e., decompression, must be considered as possibly being caused by DCI until proven otherwise.

However, apart from the more obvious acute manifestations of a single sudden decompression, individuals who have experienced repetitive exposures, e.g., commercial or professional divers and active recreational divers, may also develop subacute or chronic manifestations, even if subtle and almost symptomless.

**ABOUT THE AUTHORS**

Dr. Costantino Balestra started to study neurophysiology of fatigue, then started studies on environmental physiology issues. He teaches physiology, biostatistics, research methodology, as well as other subjects. He is the Director of the Integrative Physiology Laboratory and a full-time professor at the Haute Ecole Bruxelles-Brabant, Brussels. He is VP of DAN Europe for research and education. Immediate past President of the European Underwater and Baromedical Society.

Peter Germonpré is the Medical Director of the Centre for Hyperbaric Oxygen Therapy of the Military Hospital, Brussels, Belgium.
