system of life We get cancer because we can't not get it Cancer starts when cells revolt throwing off their molecular shackles and growing and dividing out of control in a shambolic mockery of normal life This is why we can't avoid cancer because the very genes that drive it are essential for life itself The revolution has raged on and off for millions of years But it was only in the twentieth century that doctors and scientists made any significant progress in understanding and treating cancer and it's only in the past few decades that we've finally begun to kick the mob's malignant arse Now the game is changing Scientists have infiltrated cancer's cellular rebellion and are finally learning its secrets Geneticist and science writer Kat Arney takes the reader back to the dawn of life on planet earth right up to the present day to get to the heart of what cancer really is and how by better understanding it we might one day overcome it [Bulletin of the Atomic Scientists](#) ,1970-12 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world **The Oxford Handbook of Evolutionary Medicine** Martin Brüne, Wulf Schiefenhövel, 2019-01-31 Medicine is grounded in the natural sciences where biology stands out with regard to our understanding of human physiology and the conditions that cause dysfunction Ironically though evolutionary biology is a relatively disregarded field One reason for this omission is that evolution is deemed a slow process Indeed the macroanatomical features of our species have changed very little in the last 300 000 years A more detailed look however reveals that novel ecological contingencies partly in relation to cultural evolution have brought about subtle changes pertaining to metabolism and immunology including adaptations to dietary innovations as well as adaptations to the exposure to novel pathogens Rapid pathogen evolution and evolution of cancer cells cause major problems for the immune system Moreover many adaptations to past ecologies have actually turned into risk factors for somatic disease and psychological disorder in our modern worlds i.e. mismatch among which epidemics of autoimmune diseases cardiovascular diseases diabetes and obesity as well as several forms of cancer stand out One could add depression anxiety and other psychiatric conditions to the list The Oxford Handbook of Evolutionary Medicine is a compilation of up to date insights into the evolutionary history of ourselves as a species exploring how and why our evolved design may convey vulnerability to disease Written in a classic textbook style emphasising physiology and pathophysiology of all major organ systems the Oxford Handbook of Evolutionary Medicine is valuable reading for students as well as scholars in the fields of medicine biology anthropology and psychology [Raising Godly Children in an Ungodly World](#) Ken Ham, Steve Ham, 2008-09 A look into how the principles and truth of Genesis are vital to the strong and lasting foundation of a family The authors share their own stories of growing up in a Genesis family *Integrating Evolutionary Biology Into Medical Education* Jay Schulkin, Michael L.
