Glick, Elinor Shaffer, 2014-05-22 Beyond his pivotal place in the history of scientific thought Charles Darwin's writings and his theory of evolution by natural selection have also had a profound impact on art and culture and continue to do so to this day The Literary and Cultural Reception of Charles Darwin in Europe is a comprehensive survey of this enduring cultural impact throughout the continent With chapters written by leading international scholars that explore how literary writers and popular culture responded to Darwin's thought the book also includes an extensive timeline of his cultural reception in Europe and bibliographies of major translations in each country I Have Landed Stephen Jay Gould, 2011-10 Gould s final essay collection is based on his remarkable series for Natural History magazine exactly 300 consecutive essays with never a month missed published from 1974 to 2001 Both an intellectually thrilling journey into the nature of scientific discovery and the most personal book he ever published The Earth That Modernism Built Kenny Cupers, 2024-11-26 An intellectual history of architectural modernism for an age of rising global inequality and environmental crisis The Earth That Modernism Built traces the rise of planetary design to an imperialist discourse about the influence of the earthly environment on humanity Kenny Cupers argues that to understand how the earth became an object of design we need to radically shift the

terms of analysis Rather than describing how new design ideas and practices traveled and transformed people and places across the globe this book interrogates the politics of life and earth underpinning this process It demonstrates how approaches to modern housing landscape design and infrastructure planning are indebted to an understanding of planetary and human ecology fueled by settler colonialism and imperial ambition Cupers draws from both canonical and unknown sources and archives in Germany Namibia and Poland to situate Wilhelmine and Weimar design projects in an expansive discourse about the relationship between soil settlement and race This reframing reveals connections between colonial officials planning agricultural hinterlands garden designers proselytizing geopolitical theory soil researchers turning to folklore and Bauhaus architects designing modern communities according to functionalist principles Ultimately The Earth That Modernism Built shows how the conviction that we can design our way out of environmental crisis is bound to exploitative and divisive ways of inhabiting the earth Dreamers, Visionaries, and Revolutionaries in the Life Sciences Oren Harman, Michael R. Dietrich, 2018-07-20 What are the conditions that foster true novelty and allow visionaries to set their eyes on unknown horizons What have been the challenges that have spawned new innovations and how have they shaped modern biology In Dreamers Visionaries and Revolutionaries in the Life Sciences editors Oren Harman and Michael R Dietrich explore these questions through the lives of eighteen exemplary biologists who had grand and often radical ideas that went far beyond the run of the mill science of their peers From the Frenchman Jean Baptiste Lamarck who coined the word biology in the early nineteenth century to the American James Lovelock for whom the Earth is a living breathing organism these dreamers innovated in ways that forced their contemporaries to reexamine comfortable truths With this collection readers will follow Jane Goodall into the hidden world of apes in African jungles and Francis Crick as he attacks the problem of consciousness Join Mary Lasker on her campaign to conquer cancer and follow geneticist George Church as he dreams of bringing back woolly mammoths and Neanderthals In these lives and the many others featured in these pages we discover visions that were sometimes fantastical quixotic and even threatening and destabilizing but always a challenge Avant-Garde World Creation Abigael van Alst, 2025-10-30 This book explores the widespread fascination to the status quo with world creation among early twentieth century artists and examines those trends within the European avant garde The book reflects on what the world looks and feels like before and after World War One and thus also concerns creativity and destruction alike in the context of modernity Over the course of three chapters the author focusses on works in which avant garde artists combine and experiment with various arts and media to create alternative narratives of the world's creation These works include three canonized total works of art Der Weltbaumeister The World's Master Builder 1920 an illustrated book imagined as an architectural play by the Expressionist architect Bruno Taut the Futurist opera C Victory Over the Sun 1913 by Aleksei Kruchenykh Velimir Khlebnikov Kazimir Malevich and Mikhail Matiushin and the Cubist ballet La Cr ation du monde The Creation of the World 1923 by Blaise Cendrars Fernand L ger Darius Milhaud and Jean B rlin Providing new

readings of these classic works that dive deeply into the avant garde's interartistic search for new modes of mediation as well as its dialogue with science politics and technology Abigael van Alst demonstrates how each of these artworks staged a cosmogony an alternative story of the universe s creation which simultaneously experimentally and critically recounted the story of modernity This new book is ideal for researchers and scholars in History of Art Modernism and Comparative Haeckel's Embryos Nick Hopwood, 2015-05-11 Emphasizing the changes worked by circulation and copying interpretation and debate this book uses the case to explore how pictures succeed and fail gain acceptance and spark controversy It reveals how embryonic development was made a process that we can see compare and discuss and how copying usually dismissed as unoriginal Encyclopedia of Religion and Nature Bron Taylor, 2008-08-10 An essential and indispensable reference work covering the fascinating relationship between religion and nature **Picturing Evolution** and Extinction Fae Brauer, 2015-10-05 With the increasing loss of biological diversity in this Sixth Age of Mass Extinction it is timely to show that devolutionary paranoia is not new but rather stretches back to the time of Charles Darwin It is also an opportune moment to show how human driven extinction as designated by the term Anthropocene has long been acknowledged The halcyon days of European industrial progress colonial expansion and scientific revolution trumpeted from the Great Exhibition of 1851 until the Dresden International Hygiene Exhibition of 1930 were constantly marred by fears of rampant degeneration depopulation national decline environmental devastation and racial extinction This is demonstrated by the discourses of catastrophism charted in this book that percolated across Europe in response to the theories of Darwin and Jean Baptiste Lamarck as well as Marcellin Berthelot Camille Flammarion Ernst Haeckel Louis Landouzy F lix Le Dantec Cesare Lombroso Thomas Huxley B n dite Augustin Morel Louis Pasteur lis e Reclus Rudolf Steiner and Wilhelm Wundt among others This book presents pioneering explorations of the interrelationship between these discourses and modern visual cultures and the ways in which the picturing of evolution and extinction by artists as diverse as Roger Broders Albert Besnard Fernand Cormon H l ne Dufau mile Gall Franti ek Kupka Pablo Picasso Carles Mani y Roig Sophie Taeuber and Vasilii Vatagin betrayed anxieties subliminally festering over degeneration alongside latent hopes of regeneration Following Darwin's concept of evolution as Janus faced the dialectical interplay of evolution and extinction and degeneration and regeneration is explored in modern visual cultures in Australia America Britain France Germany Russia Spain and Switzerland at significant spatio temporal junctures between 1860 and 1930 By unravelling the picturing of the dread of alcoholism cholera dysentery tuberculosis typhoid and rabies alongside phobias of animalism criminality hysteria impotency and ecological disaster each chapter makes an original contribution to this new field of scholarship By locating these discourses and visual cultures within the golden age of Neo Lamarckism they also reveal how regeneration was pictured as the Janus face of degeneration able to facilitate evolution through the inheritance of beneficial characteristics in propitious environments In striking such an uplifting note amidst the dissonant cacophony of catastrophism this book reveals why the

art and science of Transformism proved so appealing in France as elsewhere and why visual cultures of regeneration became as dominant in the twentieth century as the picturing of degeneration had been in the nineteenth century It also illuminates the paradoxical inversion that occurred in the twentieth century when devolution became equivalent to evolution for many Modernists Hence whilst this book opens with the picturing of indigenous people in Australia and North America as doomed races by the first publication of Darwin s On The Origin of Species it closes with the quest by 1930 for a regenerative suntan as dark as the skin of those indigenous people **Natural Food Cookery** Eleanor Levitt,1979-01-01 Over 300 recipes Complete range of dietary needs in delicious colorful easy dishes Illustrations *Remarkable Natural Material Surfaces and Their Engineering Potential* Michelle Lee,2014-02-04 This book explores a collection of natural surfaces their scientific characteristics and their unique engineering potential demonstrating that engineering applications can be found in unexpected places The surfaces covered range from botanical ones like rice and lotus leaves to insect surfaces like butterfly and dragonfly wings The variety of surfaces and numerous engineering potentials described show how biomimicry can be utilized to solve countless real world problems
