Arterial Hypertension

Ronald B. George

Arterial Hypertension:

Arterial Hypertension J. Rosenthal, 2012-12-06 It has been a little more than half a century since serious organized research on hypertension began. Public and even physician interest in the subject remained minimal until the early forties and even then there were not more than a dozen fulltime investigators worldwide. The first organization devoted to communicating regularly the results of hypertension research was created in Cleveland in 1945; it became the Council for High Blood Pressure Research of the American Heart Association in 1949. The early history of hypertension is not a story of progressive achievement. Richard Bright is given great credit followed by Mahomed Allbutt, Riva Rocci, Bergman and Janeway but it was not until Volhard, Fahr and Allen that some semblance of order emerged. They were followed by a younger, much more vigorous group of investigators who in fact initiated modern research in hypertension. Two more generations have followed. In the course of some fifty years we have seen emerge a magnificent body of evidence that has prescribed good treatment and contributed a considerable understanding of the many complex mechanisms involved in the hypertension. Treatment is now actively promoted by public health agencies including the World Health Organization. This is another case of treatment preceding full understanding of the nature of the disease. *Arterial hypertension in clinical practice: study and analysis of biotechnological and telemedicine models* Michele Karaboue, 2025-06-13 Arterial hypertension in clinical practice: study and analysis of biotechnological and telemedicine models. opera di Michele Karaboue. *New Hybrid Intelligent Systems for Diagnosis and Risk Evaluation of Arterial Hypertension* Patricia Melin, German Prado-Arechiga, 2017-07-04 In this book a new approach for diagnosis and risk evaluation of arterial hypertension is introduced. The new approach was implemented as a hybrid intelligent system combining modular neural networks and fuzzy systems. The different responses of the hybrid system are combined using fuzzy logic. Finally two genetic algorithms are used to perform the optimization of the modular neural networks parameters and fuzzy inference system parameters. The experimental results obtained using the proposed method on real patient data show that when the optimization is used the results can be better than without optimization. This book is intended to be a reference for scientists and physicians interested in applying soft computing techniques such as neural networks, fuzzy logic and genetic algorithms in medical diagnosis but also in general to classification and pattern recognition and similar problems. *Therapeutics in Pulmonary Arterial Hypertension* Rui Adão, Francisco Perez-Vizcaino, Paula Alexandra Da Costa Martins, Bassam Redwan, Carmen Brás-Silva, 2024-08-16 Pulmonary arterial hypertension (PAH) continues to be a condition associated with a high morbidity and mortality despite the advances in treatment strategies over the past 25 years. Although defined by strict hemodynamic criteria, PAH is a syndrome based on diverse etiologies and pathogenesis. PAH is characterized by excessive pulmonary vascular remodeling, pulmonary arterial obstruction and elevated pulmonary vascular resistance (PVR) which result in a marked increase in right ventricle (RV) afterload. Eventually the RV is not able to cope with the increased load and HF
