INTRODUCTION: Tibiotalocalcaneal (TTC) arthrodesis is a challenging procedure due to the large bone defect and the need for a large bone graft. The RAIN database is a retrospective analysis of patients who underwent TTC arthrodesis using a retrograde intramedullary nail (RAIN) and a femoral head allograft.

OBJECTIVE: The purpose of this study was to evaluate the clinical and radiographic outcomes of patients who underwent TTC arthrodesis using a RAIN and a femoral head allograft.

METHODS: A retrospective analysis of patients who underwent TTC arthrodesis using a RAIN and a femoral head allograft was performed. The RAIN database was created to track the outcomes of these patients.

RESULTS: A total of 10 patients were included in the study. The mean age was 65 years. The mean time to surgery was 12 months. The mean time to union was 18 months. The mean time to return to work was 24 months.

CONCLUSIONS: The RAIN database is a valuable tool for tracking the outcomes of patients who undergo TTC arthrodesis using a RAIN and a femoral head allograft.

Arthrodesis In The Restoration Of Working Ability:

The Arthrodesis in the Restoration of Working Ability George Chapchal, H. Arbes, 1975 Arthrodesis in the Restoration of Working Ability George Chapchal, 1975-05-01 **Traumatic Disorders of the Ankle** W.C. Hamilton, 2012-12-06

The management of ankle injuries has long been a stumbling block for orthopaedists in training. As a first year resident I was fortunate to encounter the series of articles by N Lauge Hansen and T Baek Kristensen that classified ankle injuries according to their mechanism. I found this information quite helpful throughout my residency and early years of practice. Several years ago an attempt was made to summarize this material for the benefit of the orthopaedic house staff of Thomas Jefferson University. It quickly became obvious that such a manual would require a great deal of professional illustration and editorial assistance in order to be effective. Almost simultaneously a fortuitous encounter with Ms Marie Low at that time Medical Editor of Springer Verlag New York Incorporated provided both the stimulus and the means to present this information in the manner and detail which it deserved. Contributors were carefully selected for their knowledge and experience in particular areas and for their willingness to cooperate in providing a smooth flowing manuscript. This text contains little new material. Rather it represents an attempt to bring together under one cover the wealth of extant information on this subject. Wherever a consensus could not be perceived conflicting views have been summarized as objectively as possible. Unfortunately there are still many aspects of ankle injury for which we have more questions than answers.
