The Work of Art in a Digital Age: Art, Technology and Globalisation Melissa Langdon, 2014-08-20 This book explores digital artists' articulations of globalization. Digital artworks from around the world are examined in terms of how they both express and simulate globalization's impacts through immersive participatory and interactive technologies. The author highlights some of the problems with macro and categorical approaches to the study of globalization and presents new ways of seeing the phenomenon as a series of processes and flows that are individually experienced and expressed. Instead of providing a macro analysis of large scale political and economic processes, the book offers imaginative new ways of knowing and understanding globalization as a series of micro affects. Digital art is explored in terms of how it re-centers articulations of globalization around individual experiences and offers new ways of accessing a complex topic often expressed in general and intangible terms. *The Work of Art in a Digital Age: Art Technology and Globalization* is analytic and accessible with material that is of interest to a range of researchers from different disciplines. Students studying digital art, film, globalization, cultural studies, or digital media trends will also find the content fascinating.

Art in the Age of Machine Learning Sofian Audry, 2021-11-23 An examination of machine learning art and its practice in new media art and music. Over the past decade, an artistic movement has emerged that draws on machine learning as both inspiration and medium. In this book, transdisciplinary artist-researcher Sofian Audry examines artistic practices at the intersection of machine learning and new media art, providing conceptual tools and historical perspectives for new media artists, musicians, composers, writers, curators, and theorists. Audry looks at works from a broad range of practices, including new media, installation, robotic art, visual art, electronic music, and sound, and electronic literature, connecting machine learning art to such earlier artistic practices as cybernetics, art, artificial life, art, and evolutionary art. Machine learning underlies computational systems that are biologically inspired, statistically driven, agent-based, networked entities that program themselves. Audry explains the fundamental design of machine learning algorithmic structures in terms accessible to the nonspecialist, while framing these technologies within larger historical and conceptual spaces. Audry debunks myths about machine learning art, including the ideas that machine learning can create art without artists and that machine learning will soon bring about superhuman intelligence and creativity. Audry considers learning procedures, describing how artists hijack the training process by playing with evaluative functions, discusses trainable machines and models, explaining how different types of machine learning systems enable different kinds of artistic practices, and reviews the role of data in machine learning art, showing how artists use data as a raw material to steer learning systems and arguing that machine learning allows for novel forms of algorithmic remixes.

The Arts in the Age of Soma Andrew Young (Real name Jacob East), 2025-05-15 This passionate book explores the decline of music and cinema as art forms in the past 25 years, suggesting a new cultural revolution is actually anti-culture. An Analysis of Walter Benjamin's The Work of Art in the Age of Mechanical Reproduction Rachele Dini, 2018-02-21 The Work of Art in the Age of Mechanical Reproduction combats traditional art criticism's treatment of artworks as fixed unchanging mystical objects For Walter Benjamin the consequences of addressing a work of art in this manner have a wider resonance closed off from any active visual or tactile engagement the work of art becomes an object of passive contemplation and a potential tool of oppression Benjamin argues that technology has fundamentally altered the way art is experienced Potentially open to interpretation and accessible to many art in the age of mechanical reproduction has the potential to be mobilized for radical purposes While ostensibly addressing the artistic consequences of technical reproducibility on art Benjamin also addresses the wider political consequences of this shift
