remarkable plants that shape our world with exquisite illustrations from the incomparable collections of the Royal Botanic Gardens Kew The authors are expert guides to the intriguing histories significance and uses of over 80 key plants revealing our complex relationship with them both for use and beauty Rich in cultural historical botanical and symbolic associations the plants presented here from every corner of the globe both familiar and bizarre all have fascinating stories to tell Sections cover every aspect of our interaction with plants starting with foods that laid the foundations for the development of civilizations such as wheat rice and maize and those that enliven our diet such as saffron and spices Other sections look at plants that have helped to house us including bamboo and the oak or crops that have made people rich notably tea coffee and sugar cane Many plants have been used medicinally from willow to the Madagascar periwinkle Some are the objects of obsession or are revered including the tulip the rose and the lotus and some are bizarre such as the world s largest flower rafflesia which smells of rotting flesh For anyone interested in the beauty and diversity of plants this beautiful book richly illustrated with over 200 drawings and paintings will be an inspiration and a delight

Objectivity Lorraine Daston, Peter L. Galison, 2021-02-02 Objectivity has a history and it is full of surprises In Objectivity Lorraine Daston and Peter Galison chart the emergence of objectivity in the mid nineteenth century sciences and show how the concept differs from alternatives truth to nature and trained judgment This is a story of lofty epistemic ideals fused with workaday practices in the making of scientific images From the eighteenth through the early twenty first centuries the images that reveal the deepest commitments of the empirical sciences from anatomy to crystallography are those featured in scientific atlases the compendia that teach practitioners of a discipline what is worth looking at and how to look at it Atlas images define the working objects of the sciences of the eye snowflakes galaxies skeletons even elementary particles Galison and Daston use atlas images to uncover a hidden history of scientific objectivity and its rivals Whether an atlas maker idealizes an image to capture the essentials in the name of truth to nature or refuses to erase even the most incidental detail in the name of objectivity or highlights patterns in the name of trained judgment is a decision enforced by an ethos as well as by an epistemology As Daston and Galison argue atlases shape the subjects as well as the objects of science To pursue objectivity or truth to nature or trained judgment is simultaneously to cultivate a distinctive scientific self wherein knowing and knower converge Moreover the very point at which they visibly converge is in the very act of seeing not as a separate individual but as a member of a particular scientific community Embedded in the atlas image therefore are the traces of consequential choices about knowledge persona and collective sight Objectivity is a book addressed to any one interested in the elusive and crucial notion of objectivity and in what it means to peer into the world scientifically
