Atlas of Functional Shoulder Anatomy Giovanni Di Giacomo, Nicole Pouliart, Alberto Costantini, Andrea de Vita, 2008-09-25 The anatomy of the shoulder is based on complex joint biomechanics which guarantee the coexistence of both maximum mobility and stability within the same joint In recent years diagnostic techniques such as magnetic resonance and arthroscopy have made it possible to study and better interpret those fine anatomical structures which were formerly very difficult to appreciate through open surgery dissection techniques that would compromise their integrity Difficulties of technical nature which today have been overcome thanks to technology delayed the use of endoscopy in shoulder treatment thus filling the gap previously existing if compared with other joints surgery i.e. knee Shoulder arthroscopy exploiting anatomical integrity has contributed with excellent results to the identification of those structures that have been given little descriptive importance in classical texts The purpose of this Atlas is to focus the reader's attention on a series of bone ligament muscle and tendon structures and ultrastructures on which only the most recent international literature has reported in specialized journals This Atlas also presents extremely high definition images of targeted sections obtained from cadavers preserved using state of art techniques This unique Atlas making use of images of major visual impact offers a scientific message on a topical joint using simple but dedicated descriptive language Among the various aims of this volume the authors intend to present the shoulder anatomy in a new and original way and want to help the reader to understand the complexity of scientific research highlighting the importance of the integration of anatomical biomechanical and neurophysiological knowledge The text is intended to complete the most recent and current anatomical studies of scientific research enhancing those minimal structures to which a precise and clear mechanical and neurological role is now being attributed
