White Supremacy Michael L. Blakey, 2025-07-18 This volume examines biological and cultural data that debunk a primordial basis for racism. It tracks the ancient history of all social inequity to agricultural and feudal societies. The book then focuses on social and ideological developments in European societies associated with religious justifications for the enslavement of others. The European Enlightenment built upon those prejudices with ideas about nature and acceptable natural causes of unequal social status for people newly classified into biological races. Nineteenth century anthropology is critiqued by African diasporic scholars who are the first Americans to argue that nurture rather than nature is responsible for human variation. The American Civil War brought slavery nearly to an end but racist science continued to grow as eugenics applied to justify otherwise unjustifiable structures of human inequality such as Jim Crow segregation as though they are morally sound. In constructing this historical and sociological counternarrative the author provides a critical new social history that illuminates a tangled and turgid past for contemporary readers, students and researchers with vital insights for anthropology, sociology, history, cultural studies, philosophy and American studies. *Routledge International Handbook of Food Studies* Ken

Albala, 2013-05-07 Over the past decade there has been a remarkable flowering of interest in food and nutrition both within the popular media and in academia. Scholars are increasingly using foodways, food systems and eating habits as a new unit of analysis within their own disciplines and students are rushing into classes and formal degree programs focused on food. Introduced by the editor and including original articles by over thirty leading food scholars from around the world, the *Routledge International Handbook of Food Studies* offers students, scholars and all those interested in food related research a one stop, easy to use reference guide. Each article includes a brief history of food research within a discipline or on a particular topic, a discussion of research methodologies and ideological or theoretical positions, resources for research including archives, grants and fellowship opportunities as well as suggestions for further study. Each entry also explains the logistics of succeeding as a student and professional in food studies. This clear, direct Handbook will appeal to those hoping to start a career in academic food studies as well as those hoping to shift their research to a food related project. Strongly interdisciplinary, this work will be of interest to students and scholars throughout the social sciences and humanities.
