Frontiers of Expert Systems Chilukuri Krishna Mohan,2012-12-06 The development of modern

knowledge based systems for applications ranging from medicine to finance necessitates going well beyond traditional rule based programming. **Frontiers of Expert Systems Reasoning with Limited Knowledge** attempts to satisfy such a need introducing exciting and recent advances at the frontiers of the field of expert systems. Beginning with the central topics of logic uncertainty and rule based reasoning each chapter in the book presents a different perspective on how we may solve problems that arise due to limitations in the knowledge of an expert system's reasoner. Successive chapters address i the fundamentals of knowledge based systems ii formal inference and reasoning about models of a changing and partially known world iii uncertainty and probabilistic methods iv the expression of knowledge in rule based systems v evolving representations of knowledge as a system interacts with the environment vi applying connectionist learning algorithms to improve on knowledge acquired from experts vii reasoning with cases organized in indexed hierarchies viii the process of acquiring and inductively learning knowledge ix extraction of knowledge nuggets from very large data sets and x interactions between multiple specialized reasoners with specialized knowledge bases. Each chapter takes the reader on a journey from elementary concepts to topics of active research providing a concise description of several topics within and related to the field of expert systems with pointers to practical applications and other relevant literature. **Frontiers of Expert Systems Reasoning with Limited Knowledge** is suitable as a secondary text for a graduate level course and as a reference for researchers and practitioners in industry.

The Computational Beauty of Nature Gary William Flake, 2000-01-27 Gary William Flake develops in depth the simple idea that recurrent rules can produce rich and complicated behaviors. In this book Gary William Flake develops in depth the simple idea that recurrent rules can produce rich and complicated behaviors. Distinguishing agents e.g. molecules, cells, animals and species from their interactions e.g. chemical reactions, immune system responses, sexual reproduction and evolution. Flake argues that it is the computational properties of interactions that account for much of what we think of as beautiful and interesting. From this basic thesis Flake explores what he considers to be today's four most interesting computational topics: fractals, chaos, complex systems and adaptation. Each of the book's parts can be read independently enabling even the casual reader to understand and work with the basic equations and programs. Yet the parts are bound together by the theme of the computer as a laboratory and a metaphor for understanding the universe. The inspired reader will experiment further with the ideas presented to create fractal landscapes, chaotic systems, artificial life forms, genetic algorithms and artificial neural networks.
