Building For Life Designing And Understanding The Humannature Connection:

Building for Life Stephen R. Kellert, 2012-09-26 Sustainable design has made great strides in recent years unfortunately it still falls short of fully integrating nature into our built environment Through a groundbreaking new paradigm of restorative environmental design award winning author Stephen R Kellert proposes a new architectural model of sustainability In Building For Life Kellert examines the fundamental interconnectedness of people and nature and how the loss of this connection results in a diminished quality of life This thoughtful new work illustrates how architects and designers can use simple methods to address our innate needs for contact with nature Through the use of natural lighting ventilation and materials as well as more unexpected methodologies the use of metaphor perspective enticement and symbol architects can greatly enhance our daily lives These design techniques foster intellectual development relaxation and physical and emotional well being In the works of architects like Frank Lloyd Wright Eero Saarinen Cesar Pelli Norman Foster and Michael Hopkins Kellert sees the success of these strategies and presents models for moving forward Ultimately Kellert views our fractured relationship with nature as a design problem rather than an unavoidable aspect of modern life and he proposes many practical and creative solutions for cultivating a more rewarding experience of nature in our built environment *Emerging Approaches in Design and New Connections With Nature* Özdamar, Esen Gökçe, Tandoğan,

Okşan, 2021-12-03 In today's changing and transforming socio economic political cultural and technological paradigms we encounter many methodologies approaches proposals and practices in reconsidering the disappearing or emerging relations in the human nonhuman environment nature interaction These approaches proposals and practices range from new methods of urban gardening to biophilic design and augmented immersive environments However these human centric approaches which only aim to meet their needs or emerge as technology oriented replicas and representations of nature lead to a departure from a holistic approach to the natural and artificial environment Therefore how can new and emerging approaches or methodologies draw a holistic framework for environmental health sustainability wellness and co existence between environments for all living beings *Emerging Approaches in Design and New Connections With Nature* covers a variety of topics related to the intersection between nature environment and ways of living and provides a comprehensive guide to biophilic design and the idea of design and nature including benefits theories and effects Covering topics such as biophilic design and sustainability soundscapes and landscapes and urban environments and design it is ideal for architects designers urban planners landscape designers policymakers engineers interior designers practitioners students academicians and researchers **Designing for Hope** Dominique Hes, Chrisna du Plessis, 2014-10-17 A forward looking

book on sustainable design that describes problems and then by providing a different way to conceptualise design and development leads on to examples of regenerative solutions Its aim is to move the discussion away from doing less but still detracting from our ecological capital to positively contributing and adding to this capital This book offers a hopeful response

to the often frightening changes and challenges we face arguing that we can actively create a positive and abundant future through mindful contributive engagement that is rooted in a living systems based worldview Concepts and practices such as Regenerative Development Biophilic Design Biomimicry Permaculture and Positive Development are explored through interviews and case studies from the built environment to try and answer questions such as How can projects focus on creating a positive ecological footprint and contribute to community How can we as practitioners restore and enrich the relationships in our projects and How does design focus hope and create a positive legacy

Avatar and Nature Spirituality Bron Taylor, 2013-09-30

Avatar and Nature Spirituality explores the cultural and religious significance of James Cameron's film Avatar 2010, one of the most commercially successful motion pictures of all time. Its success was due in no small measure to the beauty of the Pandora landscape and the dramatic heart wrenching plight of its nature venerating inhabitants. To some audience members the film was inspirational, leading them to express affinity with the film's message of ecological interdependence and animistic spirituality. Some were moved to support the efforts of indigenous peoples who were metaphorically and sympathetically depicted in the film to protect their cultures and environments. To others the film was politically, ethically, or spiritually dangerous. Indeed, the global reception to the film was intense, contested, and often confusing. To illuminate the film and its reception, this book draws on an interdisciplinary team of scholars: experts in indigenous traditions, religious studies, anthropology, literature, and film, and post-colonial studies. Readers will learn about the cultural and religious trends that gave rise to the film and the reasons these trends are feared, resisted, and criticized, enabling them to wrestle with their own views, not only about the film but about the controversy surrounding it. Like the film itself, Avatar and Nature Spirituality provides an opportunity for considering afresh the ongoing struggle to determine how we should live on our home planet and what sorts of political, economic, and spiritual values and practices would best guide us.

Advanced Studies in Efficient Environmental Design and City Planning Ferdinando Trapani, Nabil Mohareb, Federica Rosso, Denia Kolokotsa, Sreetheran

Maruthaveeran, Mahmoud Ghoneem, 2021-09-24 This book explains how learning from past mistakes in urban design can help to enhance sustainable cities and how the principles of Green Urbanism can yield more resilient urban settlements

Environmental design is a fundamental principle in shaping cities. However, environmental challenges like increased resource consumption, water degradation, and waste-related issues are among the greatest problems now facing humanity, which is why these issues need to be considered with regard to smart cities, either for the development of new urban centers or for the transformation of existing cities. The book not only discusses the importance of integrating sustainability principles in the urban design process but also demonstrates their application to the development of sustainable cities. As such, the book offers essential information and a source of inspiration for all those who want to build more sustainable cities.

The papers in the book cover such topics as Ecosystems modelling, Natural resources management, Environmental indicators and measurements, Sustainable development and planning, Data mining applications, Energy and the environment, Soil contamination and recovery, Water resources issues, Waste management, Ecotoxicity, Ecosystems maintenance, Ecosystems and climate change, Environmental economics and benefit analysis, Recovery of damaged areas, Socio-economic areas, Environmental management, Policies and regulations, Protection and mitigation, Knowledge dissemination and internet applications, Ecological services, Innovation in ecosystems management, Landscape development and management.

Design with the Desert Richard Malloy, John Brock, Anthony Floyd, Margaret Livingston, Robert H. Webb, 2016-04-19. Typical development in the American Southwest often resulted in scraping the desert lands of the ancient living landscape to be replaced with one that is human-made and dependent on a large consumption of energy and natural resources. This transdisciplinary book explores the natural and built environment of this desert region and introduces development tools for shaping its future in a more sustainable way. It offers valuable insights to help promote ecological balance between nature and the built environment in the American Southwest and in other ecologically fragile regions around the world.
