Jaggard, R R Morton,2003-09-02 A textbook on design economics for students of architecture building and quantity surveying it examines the links between design and the costs of building as well as more general economic issues and their significance for designers and builders Building Economics: Theory and Practice Rosalie Ruegg, Harold Marshall,2013-11-11 We no longer build buildings like we used to nor do we pay for them in the same way Buildings today are no longer only shelter but are also life support systems communication terminals data manufacturing centers and much more Buildings are incredibly expensive tools that must be constantly adjusted to function efficiently The economics of building has become as complex as its design When buildings were shelter they lasted longer than their builders The average gothic master mason lived 35 or 40 years Cathedrals took 3 or 4 hundred years to build Cost estimates were verified by great great grandchildren of the original designer Today creative economics has become as important as creative design and creative building The client brings builder contractor architect and facilities manager to account in their life time The cost of building can therefore no longer be left to chance or act of god Solutions are no longer as ingeniously simple as those proposed by a Florentine builder early in the 15th century He proposed to center the dome of S Maria del Fiore on a great mound of earth mixed with pennies When the job was done street urchins would carry away the dirt in their search for the pennies This was a serious suggestion offered by an early construction manager before Brunelleschi solved the problem more sensibly **Building Economics** Goran Runeson,2000 Offers students and practitioners of building and architecture an insight into economic principles and techniques and a practical illustration of how economic events and policies affect the building and construction industry *Construction Economics and Building Design* R.
