ESL Design and Verification Grant Martin, Brian Bailey, Andrew Piziali, 2010-07-27 Visit the authors companion site <http://www.electronicssystemlevel.com> Includes interactive forum with the authors Electronic System Level ESL design has mainstreamed it is now an established approach at most of the world s leading system on chip SoC design companies and is being used increasingly in system design From its genesis as an algorithm modeling methodology with no links to implementation ESL is evolving into a set of complementary methodologies that enable embedded system design verification and debug through to the hardware and software implementation of custom SoC system on FPGA system on board and entire multi board systems This book arises from experience the authors have gained from years of work as industry practitioners in the Electronic System Level design area they have seen SLD or ESL go through many stages and false starts and have observed that the shift in design methodologies

to ESL is finally occurring This is partly because of ESL technologies themselves are stabilizing on a useful set of languages being standardized SystemC is the most notable and use models are being identified that are beginning to get real adoption ESL DESIGN VERIFICATION offers a true prescriptive guide to ESL that reviews its past and outlines the best practices of today Table of Contents CHAPTER 1 WHAT IS ESL CHAPTER 2 TAXONOMY AND DEFINITIONS FOR THE ELECTRONIC SYSTEM LEVEL CHAPTER 3 EVOLUTION OF ESL DEVELOPMENT CHAPTER 4 WHAT ARE THE ENABLERS OF ESL CHAPTER 5 ESL FLOW CHAPTER 6 SPECIFICATIONS AND MODELING CHAPTER 7 PRE PARTITIONING ANALYSIS CHAPTER 8 PARTITIONING CHAPTER 9 POST PARTITIONING ANALYSIS AND DEBUG CHAPTER 10 POST PARTITIONING VERIFICATION CHAPTER 11 HARDWARE IMPLEMENTATION CHAPTER 12 SOFTWARE IMPLEMENTATION CHAPTER 13 USE OF ESL FOR IMPLEMENTATION VERIFICATION CHAPTER 14 RESEARCH EMERGING AND FUTURE PROSPECTS APPENDIX LIST OF ACRONYMS Provides broad comprehensive coverage not available in any other such book Massive global appeal with an internationally recognised author team Crammed full of state of the art content from notable industry experts

System-level Modelling and Design Space Exploration for Multiprocessor Embedded System-on-chip Architectures Cagkan Erbas,2006 Modern embedded systems come with contradictory design constraints On one hand these systems often target mass production and battery based devices and therefore should be cheap and power efficient On the other hand they still need to show high sometimes real time performance and often support multiple applications and standards which requires high programmability This wide spectrum of design requirements leads to complex heterogeneous System on Chip SoC architectures consisting of several types of processors from fully programmable microprocessors to configurable processing cores and customized hardware components integrated on a single chip This study targets such multiprocessor embedded systems and strives to develop algorithms methods and tools to deal with a number of fundamental problems which are encountered by the system designers during the early design stages

*Designing SOC's with Configured Cores* Steve Leibson,2006-08-15 Microprocessor cores used for SOC design are the direct descendants of Intel's original 4004 microprocessor Just as packaged microprocessor ICs vary widely in their attributes so do microprocessors packaged as IP cores However SOC designers still compare and select processor cores the way they previously compared and selected packaged microprocessor ICs The big problem with this selection method is that it assumes that the laws of the microprocessor universe have remained unchanged for decades This assumption is no longer valid Processor cores for SOC designs can be far more plastic than microprocessor ICs for board level system designs Shaping these cores for specific applications produces much better processor efficiency and much lower system clock rates Together Tensilica's Xtensa and Diamond processor cores constitute a family of software compatible microprocessors covering an extremely wide performance range from simple control processors to DSPs to 3 way superscalar processors Yet all of these processors use the same software development tools so that programmers familiar with one processor in the family can easily switch to

another This book emphasizes a processor centric MPSOC multiple processor SOC design style shaped by the realities of the 21st century and nanometer silicon It advocates the assignment of tasks to firmware controlled processors whenever possible to maximize SOC flexibility cut power dissipation reduce the size and number of hand built logic blocks shrink the associated verification effort and minimize the overall design risk An essential no nonsense guide to the design of 21st century mega gate SOC s using nanometer silicon Discusses today s key issues affecting SOC design based on author s decades of personal experience in developing large digital systems as a design engineer while working at Hewlett Packard s Desktop Computer Division and at EDA workstation pioneer Cadnetix and covering such topics as an award winning technology journalist and editor in chief for EDN magazine and the Microprocessor Report Explores conventionally accepted boundaries and perceived limits of processor based system design and then explodes these artificial constraints through a fresh outlook on and discussion of the special abilities of processor cores designed specifically for SOC design Thorough exploration of the evolution of processors and processor cores used for ASIC and SOC design with a look at where the industry has come from and where it s going Easy to understand explanations of the capabilities of configurable and extensible processor cores through a detailed examination of Tensilica s configurable extensible Xtensa processor core and six pre configured Diamond cores The most comprehensive assessment available of the practical aspects of configuring and using multiple processor cores to achieve very difficult and ambitious SOC price performance and power design goals

**Multiprocessor Systems on Chip** Torsten Kempf,Gerd Ascheid,Rainer Leupers,2011-02-11 This book gives a comprehensive introduction to the design challenges of MPSoC platforms focusing on early design space exploration It defines an iterative methodology to increase the abstraction level so that evaluation of design decisions can be performed earlier in the design process These techniques enable exploration on the system level before undertaking time and cost intensive development

**Handbook of Computer Architecture** Anupam Chattopadhyay,2024-12-20 This handbook presents the key topics in the area of computer architecture covering from the basic to the most advanced topics including software and hardware design methodologies It will provide readers with the most comprehensive updated reference information covering applications in single core processors multicore processors application specific processors reconfigurable architectures emerging computing architectures processor design and programming flows test and verification This information benefits the readers as a full and quick technical reference with a high level review of computer architecture technology detailed technical descriptions and the latest practical applications

Platform Based Design at the Electronic System Level Mark Burton,Adam Morawiec,2007-05-09 Platform Based Design at the Electronic System Level presents a multi faceted view of the set of problems that the electronic industry currently faces in the development and integration of complex heterogeneous systems including both hardware and software components It analyses and proposes solutions related to the provision of integration platforms by SoC and IP providers in light of the needs and requirements expressed by the system companies they are the

users of such platforms which they apply to develop their next generation products Further the book tries to draw a comprehensive picture of the current interfaces between the platform providers and users defined by technical requirements current design methodology and flows standards and finally by the business context and relationships which should not to be underestimated These producer consumer shared interfaces enable or should enable the exchange of a well understood and complete set of data between both parties to ensure design efficiency high productivity and best use of domain specific expertise and knowledge The problems to be solved are related to modelling of platform functionality and performance formalisms methods metrics interoperability of models architecture exploration early SW development in parallel to the HW platform instantiation verification and debugging methods and flows management of complexity at various abstraction levels and the implications of the trade offs between the accuracy and complexity of models The solutions discussed by the contributors to this book have one common denominator these are standards In the general sense the book provides views on why and what kind of standards are the prerequisite to the deployment of a platform based design ecosystem in which cooperation is made possible between all parties involved in system development system houses platform and IP providers and EDA companies The material presented in Platform Based Design at the Electronic System Level will help system architects system integrators design engineers IP developers and researchers to understand the state of the art and future tendencies in various aspects of modelling of system platforms
