Building The Health Bridge:

The Health of Populations Stephen J. Kunitz M.D.,2006-09-28 In the maelstrom of current public health debate over the social determinants of health this book offers a well balanced discussion on the roots of prevalent strains of thought on the matter While this area of research deals in complex problems it is often dominated by those who deploy rather categorical partisan positions citing from a wide range of contradictory statistical studies Stephen Kunitz brings a measured balanced and independent perspective to bear on the debate taking a step back from current arguments to look at the fundamental issues through a socio historical lens Part I describes how ideas about the costs and benefits of industrialization and about the causes of disease have been used by writers from different ideological persuasions to explain the health of populations Part II focuses on some of the ideas that have been particularly influential in contemporary debates factors such as standard of living community and its loss inequality and globalization The fact that these have been used to support differing explanations of the determinants of population health suggests that there are no easy generalizations in a field with so many discrepant findings Scientists often ignore anomalous findings in the interests of advancing a particular paradigm until the anomalies outweigh the norm and a new paradigm is created This book argues that in considering social determinants of health no meaningful overarching explanations may be possible Rather it is by immersion in the reality of particular contexts work settings historical periods geopolitical regions and governmental credos that we may gain a better understanding of the way in which social forces shape patterns of health and disease

Egypt's Other Wars Nancy Elizabeth Gallagher,2021-10-29 Three devastating epidemics swept Egypt in the 1940 s killing more people than all the wars Egypt has fought in the twentieth century Egypt's Other Wars vividly reconstructs the nation's struggle against malaria relapsing fever and cholera and explores the unique combination of forces that put public health at the top of the national political agenda Egypt in the 1940 s as in the throes of a nationalist upheaval Nationalists of all political ideologies attributed the severe epidemics that the country was experiencing to Egypt's status as an underdeveloped and colonized nation The epidemics were therefore viewed for the first time as not only a public health crisis but also a political problem that called for a political solution
