Arnold Gelfand Mathematical Seminars Geometry And Singularity Theory:

The Arnold-Gelfand Mathematical Seminars V. Arnold, I.M. Gelfand, Mikhail Smirnov, Vladimir S. Retakh, 2012-12-06

It is very tempting but a little bit dangerous to compare the style of two great mathematicians or of their schools I think that it would be better to compare papers from both schools dedicated to one area geometry and to leave conclusions to a reader of this volume The collaboration of these two schools is not new One of the best mathematics journals Functional Analysis and its Applications had I M Gelfand as its chief editor and V I Arnold as vice chief editor Appearances in one issue of the journal presenting remarkable papers from seminars of Arnold and Gelfand always left a strong impact on all of mathematics We hope that this volume will have a similar impact Papers from Arnold's seminar are devoted to three important directions developed by his school Symplectic Geometry F Lalonde and D McDuff Theory of Singularities and its applications F Aicardi I Bogaevski M Kazarian Geometry of Curves and Manifolds S Anisov V Chekanov L Guieu E Murre and V Ovsienko S Gusein Zade and S Natanzon A little bit outside of these areas is a very interesting paper by M Karoubi Produit cyclique d'espaces et opérations de Steenrod

Topics in Singularity Theory Aleksei Nikolaevich Khovanskiĭ, 1997 Singularities in Geometry and Topology Jean-Paul Brasselet, 2007 Singularity theory appears in numerous branches of mathematics as well as in many emerging areas such as robotics control theory imaging and various evolving areas in physics The purpose of this proceedings volume is to cover recent developments in singularity theory and to introduce young researchers from developing countries to singularities in geometry and topology The contributions discuss singularities in both complex and real geometry As such they provide a natural continuation of the previous school on singularities held at ICTP 1991 which is recognized as having had a major influence in the field Harmony of Gröbner Bases and the Modern Industrial Society Takayuki Hibi, 2012 This volume consists of research papers and expository survey articles presented by the invited speakers of the conference on OC Harmony of Gröbner Bases and the Modern Industrial Society OCO Topics include computational commutative algebra algebraic statistics algorithms of D modules and combinatorics This volume also provides current trends on Gröbner bases and will stimulate further development of many research areas surrounding Gröbner bases

Arnold's Problems Vladimir I. Arnold, 2004-06-24 Vladimir Arnold is one of the most outstanding mathematicians of our time Many of these problems are at the front line of current research *Analysis, Geometry, Number Theory: The Mathematics of Leon Ehrenpreis* Eric Grinberg, 2000 This book presents the proceedings from the conference honoring the work of Leon Ehrenpreis Professor Ehrenpreis worked in many different areas of mathematics and found connections among all of them For example one can find his analytic ideas in the context of number theory geometric thinking within analysis transcendental number theory applied to partial differential equations and more The conference brought together the communities of mathematicians working in the areas of interest to Professor Ehrenpreis and allowed them to share the research inspired by his work The collection of articles here presents current research on PDEs several complex variables

analytic number theory integral geometry and tomography The work of Professor Ehrenpreis has contributed to basic definitions in these areas and has motivated a wealth of research results This volume offers a survey of the fundamental principles that unified the conference and influenced the mathematics of Leon Ehrenpreis *Singularities In Geometry And Topology - Proceedings Of The Trieste Singularity Summer School And Workshop* Jean-paul Brasselet,James Damon,Dung Trang Le,Mutsuo Oka,2007-01-16 Singularity theory appears in numerous branches of mathematics as well as in many emerging areas such as robotics control theory imaging and various evolving areas in physics The purpose of this proceedings volume is to cover recent developments in singularity theory and to introduce young researchers from developing countries to singularities in geometry and topology The contributions discuss singularities in both complex and real geometry As such they provide a natural continuation of the previous school on singularities held at ICTP 1991 which is recognized as having had a major influence in the field **Introduction to Symplectic Topology** Dusa McDuff,Dietmar Salamon,2017 Over the last number of years powerful new methods in analysis and topology have led to the development of the modern global theory of symplectic topology including several striking and important results This new third edition of a classic book in the field includes updates and new material to bring the material right up to date Differential and Symplectic Topology of Knots and Curves Serge Tabachnikov,1999 This book presents a collection of papers on two related topics topology of knots and knot like objects such as curves on surfaces and topology of Legendrian knots and links in 3 dimensional contact manifolds Featured is the work of international experts in knot theory quantum knot invariants knot invariants of finite type in symplectic and contact topology and in singularity theory The interplay of diverse methods from these fields makes this volume unique in the study of Legendrian knots and knot like objects such as wave fronts A particularly enticing feature of the volume is its international significance The volume successfully embodies a fine collaborative effort by worldwide experts from Belgium France Germany Israel Japan Poland Russia Sweden the U K and the U S **Topics in Algebraic and Noncommutative Geometry** Ruth Ingrid Michler,2003 This book presents the proceedings of two conferences Resolution des singularites et geometrie non commutative and the Annapolis algebraic geometry conference Research articles in the volume cover various topics of algebraic geometry including the theory of Jacobians singularities applications to cryptography and more The book is suitable for graduate students and research mathematicians interested in algebraic geometry *Handbook of Differential Geometry* Franki J.E. Dillen,Leopold C.A. Verstraelen,2005-11-29 In the series of volumes which together will constitute the Handbook of Differential Geometry we try to give a rather complete survey of the field of differential geometry The different chapters will both deal with the basic material of differential geometry and with research results old and recent All chapters are written by experts in the area and contain a large bibliography In this second volume a wide range of areas in the very broad field of differential geometry is discussed as there are Riemannian geometry Lorentzian geometry Finsler geometry symplectic geometry contact geometry

complex geometry Lagrange geometry and the geometry of foliations Although this does not cover the whole of differential geometry the reader will be provided with an overview of some its most important areas Written by experts and covering recent research Extensive bibliography Dealing with a diverse range of areas Starting from the basics Discrete and Computational Geometry Boris Aronov, Saugata Basu, Janos Pach, Micha Sharir, 2003-06-23 An impressive collection of original research papers in discrete and computational geometry contributed by many leading researchers in these fields as a tribute to Jacob E Goodman and Richard Pollack two of the founding fathers of the area on the occasion of their 23 x 100 birthdays The topics covered by the 41 papers provide professionals and graduate students with a comprehensive presentation of the state of the art in most aspects of discrete and computational geometry including geometric algorithms study of arrangements geometric graph theory quantitative and algorithmic real algebraic geometry with important connections to algebraic geometry convexity polyhedral combinatorics the theory of packing covering and tiling The book serves as an invaluable source of reference in this discipline **Integral Geometry And Convexity - Proceedings Of The International Conference** Eric L Grinberg, Gaoyong Zhang, Jiazuo Zhou, Shougui Li, 2006-04-20 Integral geometry known as geometric probability in the past originated from Buffon's needle experiment Remarkable advances have been made in several areas that involve the theory of convex bodies This volume brings together contributions by leading international researchers in integral geometry convex geometry complex geometry probability statistics and other convexity related branches The articles cover both recent results and exciting directions for future research *Stochastic and Integral Geometry* Rolf Schneider, Wolfgang Weil, 2008-09-08 Stochastic geometry deals with models for random geometric structures Its early beginnings are found in playful geometric probability questions and it has vigorously developed during recent decades when an increasing number of real world applications in various sciences required solid mathematical foundations Integral geometry studies geometric mean values with respect to invariant measures and is therefore the appropriate tool for the investigation of random geometric structures that exhibit invariance under translations or motions Stochastic and Integral Geometry provides the mathematically oriented reader with a rigorous and detailed introduction to the basic stationary models used in stochastic geometry random sets point processes random mosaics and to the integral geometry that is needed for their investigation The interplay between both disciplines is demonstrated by various fundamental results A chapter on selected problems about geometric probabilities and an outlook to non stationary models are included and much additional information is given in the section notes **Real and Complex Singularities** Victor Goryunov, Kevin Houston, Roberta Wik-Atique, 2012 This volume is a collection of papers presented at the 11th International Workshop on Real and Complex Singularities held July 26-30 2010 in Sao Carlos Brazil in honor of David Mond's 60th birthday This volume reflects the high level of the conference discussing the most recent results and applications of singularity theory Articles in the first part cover pure singularity theory invariants classification theory and Milnor fibres Articles in the second part cover

singularities in topology and differential geometry as well as algebraic geometry and bifurcation theory Artin Greenberg function of a plane curve singularity metric theory of singularities symplectic singularities cobordisms of fold maps Goursat distributions sections of analytic varieties Vassiliev invariants projections of hypersurfaces and linearity of the Jacobian ideal

Brualdi, 2010 This volume contains a collection of papers presented at the international conference IPM 20 Combinatorics 2009 which was held at the Institute for Research in Fundamental Sciences in Tehran Iran May 15 21 2009 The conference celebrated IPM's 20th anniversary and was dedicated to Reza Khosrovshahi one of the founders of IPM and the director of its School of Mathematics from 1996 to 2007 on the occasion of his 70th birthday The conference attracted an international group of distinguished researchers from many different parts of combinatorics and graph theory including permutations designs graph minors graph coloring graph eigenvalues distance regular graphs and association schemes hypergraphs and arrangements This volume contains a collection of papers presented at the international conference IPM 20 Combinatorics 2009 which was held at the Institute for Research in Fundamental Sciences in Tehran Iran May 15 21 2009 The conference celebrated IPM's 20th anniversary and was dedicated to Reza Khosrovshahi one of the founders of IPM and the director of its School of Mathematics from 1996 to 2007 on the occasion of his 70th birthday The conference attracted an international group of distinguished researchers from many different parts of combinatorics and graph theory including permutations designs graph minors graph coloring graph eigenvalues distance regular graphs and association schemes hypergraphs and arrangements **New Developments in Singularity Theory** Dirk Wiersma, C.T.C. Wall, V. Zakalyukin, 2012-12-06 Singularities arise naturally in a huge number of different areas of mathematics and science As a consequence singularity theory lies at the crossroads of paths that connect many of the most important areas of applications of mathematics with some of its most abstract regions The main goal in most problems of singularity theory is to understand the dependence of some objects of analysis geometry physics or other science functions varieties mappings vector or tensor fields differential equations models etc on parameters The articles collected here can be grouped under three headings A Singularities of real maps B Singular complex variables and C Singularities of homomorphic maps **Real and Complex Singularities** Terence Gaffney, Maria Aparecida Soares Ruas, 2004 The Workshop on Real and Complex Singularities is held every other year at the Instituto de Ciencias Matematicas e de Computacao Sao Carlos Brazil and brings together specialists in the vanguard of singularities and its applications This volume contains articles contributed by participants of the seventh workshop **Proceedings of the International Conference Integral Geometry and Convexity** Eric Grinberg, 2006 Integral geometry known as geometric probability in the past originated from Buffon's needle experiment Remarkable advances have been made in several areas that involve the theory of convex bodies This volume brings together contributions by leading international researchers in integral geometry convex geometry complex geometry probability statistics and other convexity related branches The articles
