General Mental Ability (GMA) has empirical evidence supporting it as a strong predictor of job performance. However, there are agreements and disagreements about the role of GMA in Industrial, Work, and Organizational (IWO) psychology. Some embrace it enthusiastically; some tolerate it; some spend their entire careers looking for ways to minimize the effects of GMA in personnel selection; and, finally, some revile and loath the very concept. The reasons for the divergence vary, and in this special issue of *Human Performance* we brought together leading IWO psychologists and researchers to discuss the potential role of GMA in personnel selection. In this summary, we synthesize, around eight themes, the main points of agreement and disagreements across the contributing authors. The major themes and questions are: (a) predictive value of GMA for real-life outcomes and work behaviors, (b) predictive value of GMA versus specific abilities, (c) the consequences of the criterion problem for GMA validities, (d) is utility evidence for GMA convincing?, (e) are the negative reactions to GMA tests a result of group differences?, (f) is theoretical knowledge of GMA adequate?, (g) is there promise in new methods of testing for GMA?, and (h) what is the current status of non-GMA predictors as substitutes or supplements to GMA?

Soft Computing Applications Valentina Emilia Balas, Lakhmi C. Jain, Branko Kovačević, 2015-11-02

These volumes constitute the Proceedings of the 6th International Workshop on Soft Computing Applications or SOFA 2014 held on 24-26 July 2014 in Timisoara, Romania. This edition was organized by the University of Belgrade, Serbia, in conjunction with the Romanian Society of Control Engineering and Technical Informatics, SRAIT Arad Section, The General Association of Engineers in Romania, Arad Section, Institute of Computer Science, Iasi Branch of the Romanian Academy, and IEEE Romanian Section. The Soft Computing concept was introduced by Lotfi Zadeh in 1991 and serves to highlight the emergence of computing methodologies in which the accent is on exploiting the tolerance for imprecision and uncertainty to achieve tractability, robustness, and low solution cost. Soft computing facilitates the use of fuzzy logic, neurocomputing, evolutionary computing, and probabilistic computing in combination, leading to the concept of hybrid intelligent systems. The combination of such intelligent systems tools and a large number of applications introduces a need for a synergy of scientific and technological disciplines in order to show the great potential of Soft Computing in all domains. The conference papers included in these proceedings, published post-conference, were grouped into the following areas of research: Image, Text, and Signal Processing; Intelligent Transportation Modeling and Applications; Biomedical Applications; Neural Network and Applications; Knowledge-Based Technologies for Web Applications; Cloud Computing; Security Algorithms and Computer Networks; Knowledge-Based Technologies; Soft Computing Techniques for Time Series Analysis; Soft Computing and Fuzzy Logic in Biometrics; Fuzzy Applications; Theory and Fuzzy Control; Business Process Management Methods and Applications in Electrical Engineering. The volumes provide useful information to professors, researchers, and graduated students in the area of soft computing techniques and applications as they report new research work on challenging issues.

A Critique of Emotional Intelligence Kevin R. Murphy, 2014-02-25

This book analyzes important criticisms of the current research on Emotional Intelligence (EI), a topic of growing interest in the behavioral and social sciences. It looks at emotional intelligence research and EI interventions from a scientific and measurement perspective and identifies ways of improving the often shaky foundations of our current conceptions of emotional intelligence. With a balanced viewpoint, *A Critique of Emotional Intelligence* includes contributions from leading critics of EI research and practice, e.g., Frank Landy, Mark Schmitz, Chockalingam Viswesvaran, proponents of EI, e.g., Neal Ashkanasy, Catherine Daus, as well as a broad range of well-informed authors. Proponents claim that EI is more important in life than academic intelligence, while opponents claim that there is no such thing as emotional intelligence. Three key criticisms that have been leveled at emotional intelligence include: 1) EI is poorly defined and poorly measured; 2) EI is a new name for familiar constructs that have been studied for decades; and 3) claims about EI are overblown. While the book presents these criticisms, the final section proposes ways of improving EI research and practice with EI theories, tests, and applications.
