*CRC Handbook of High Resolution Infrared Laboratory Spectra of Atmospheric Interest* David G. Murcray, Murcray DG., 1981      CRC Handbook of High Resolution Infrared Laboratory Spectra of Atmospheric Interest David G. Murcray, Murcray DG., 1981      Handbook of High Resolution Infrared Laboratory Spectra of Atmospheric Interest (1981) Aaron Goldman, David G. Murcray, 2017-11-22 The handbook presents spectra to be utilized for the detection and measurement of new constituents in the earth's atmosphere and to obtain data for common minor species with large gas amounts in the absorption cell such as CH<sub>4</sub> and N<sub>2</sub>O. These results can be applied in the identification of absorption features in atmospheric spectra determined over long atmospheric paths. The spectra were recorded with Fourier Transform Spectrometers which are more precise than grating spectrometers. Each molecule spectrum was plotted on two scales: a condensed scale covering the range from 75 to 300 cm<sup>-1</sup> in one frame and an expanded view covering 20 or 10 cm<sup>-1</sup> per frame. Each plot contains the name of the molecule, chemical formula, the gas pressure, cell length, and estimated resolution of the spectrum.      **National Union Catalog**, 1982      **Infrared Spaceborne Remote Sensing**, 1995      **Literature 1984, Part 2** S. Phosgene  $\text{COCl}_2$  is a C1 chemical of major industrial importance. The annual production worldwide is more than 1 million tons, 90% of which is used in the manufacture of isocyanates and of polyurethane and polycarbonate resins. Phosgene is also extensively used as a synthetic reagent in organic chemistry, in particular in the preparation of acyl chlorides, chloroformate esters, organic carbonates, and carbamoyl chlorides. Although more than 7000 papers have appeared on phosgene and some 1000 papers on its analogues, this is the first book on these interesting chemicals. It presents a critical treatise of phosgene, ranging from its discovery and subsequent use as a war gas to some potential applications of the material into the 21st century. It includes chapters on biological effects and industrial hygiene, on synthesis, formation, and manufacture, analysis, uses, environmental effects, and physical and thermodynamic properties. Reactions with organic and inorganic materials are described. Four of the seventeen chapters are devoted to a description of the carbonyl halides, especially carbonyl difluoride, related to phosgene, and a special section deals collectively with the electronic structures of carbonyl halide molecules. Featuring the first ever comprehensive discussion of the medical effects of phosgene poisoning and the most modern methods of treating exposure victims, the book will be of interest to historians and militarists and those working in the chemical industries, heavy chemicals, agricultural, and pharmaceutical universities, libraries, hospitals, medical research centres, museums, environmental research centres, poison units, and health and safety institutions world wide.

**Molecules and Radiation** Jeffrey I. Steinfeld, 2005-06-10. This unified treatment introduces upper level undergraduates and graduate students to the concepts and methods of modern molecular spectroscopy and their applications to quantum electronics, lasers, and related optical phenomena. Starting with a review of the prerequisite quantum mechanical background, the text examines atomic spectra and diatomic molecules, including the rotation and vibration of diatomic molecules and their electronic spectra. A discussion of rudimentary group theory advances to considerations of the rotational spectra of polyatomic molecules and their vibrational and electronic spectra, molecular beams, masers, and lasers, and a variety of forms of spectroscopy, including optical resonance spectroscopy, coherent transient spectroscopy, multiple photon spectroscopy, and spectroscopy beyond molecular constants. The text concludes with a series of useful appendices.
