Recent Topics in Advanced Materials Science Akio Makishima,2020-02-26 The range of materials science is very vast and its development is proportionally rapid This book picks up and explains various topics of materials science using figures and chemical formulae for readers who have a knowledge of chemistry at the undergraduate level In order to view the progress of materials science the book is divided into four parts the first three of which relate topics concerning typical elements transition elements and lanthanide and actinide The fourth section details innovative issues in materials science

Thermal Ionization Mass Spectrometry (TIMS) Akio Makishima,2016-03-14 This first

book to discuss both separation chemistry and mass spectrometry for mineral and rock analysis compares the two frequently used techniques analyzing both their scope and limitations by way of numerous practical examples The excellent and highly experienced author adopts a comprehensive and systematic approach reviewing all the steps involved in an analytical workflow In addition to thermal ionization mass spectrometry TIMS he also discusses applications of ICP MS Furthermore alongside detailed protocols on sample preparation and mass spectrometric measurements numerous practical hints are given A must have handy guide for all isotope geochemists and anyone involved in isotope analysis

Heavy Elements And Related New Phenomena (In 2 Volumes) Walter Greiner,Raj Kumar Gupta,1999-06-17 This book reviews recent developments in the field of superheavy elements and the related phenomena of fission cluster radioactivity and drip line physics Both the experimental and theoretical aspects are dealt with in detail For the production of new elements in the laboratory the process of cold compound nucleus formation is found to be most favorable both theoretically and experimentally However experimentally hot fusion of nuclei has also been used Both the physical and chemical methods of synthesizing new elements are discussed The theoretical approaches considered here are those of the quantum mechanical fragmentation theory the self consistent Hartree Fock theory and the relativistic mean field theory Fission a process inverse to the fusion of two nuclei is also observed to be most favourably a cold phenomenon Other important results are bi modal fission and high n multiplicity fission which leads to the hyperdeformed scission mode Cluster radioactivity is discussed both as a heavy cluster emission process and as super asymmetric fission The theory as well as the present experimental status are reviewed Physics at drip lines is interesting not only for their structural properties but also for their use in the fusion of two nuclei both aspects are discussed
