Creation Of Scientific Effects Heinrich Hertz And Electric Waves:

The Creation of Scientific Effects Jed Z. Buchwald, 1994-09-15 This book is an attempt to reconstitute the tacit knowledge the shared unwritten assumptions values and understandings that shapes the work of science Jed Z Buchwald uses as his focus the social and intellectual world of nineteenth century German physics Drawing on the lab notes published papers and unpublished manuscripts of Heinrich Hertz Buchwald recreates Hertz s 1887 invention of a device that produced electromagnetic waves in wires The invention itself was serendipitous and the device was quickly transformed but Hertz s early experiments led to major innovations in electrodynamics Buchwald explores the difficulty Hertz had in reconciling the theories of other physicists including Hermann von Helmholtz and James Clerk Maxwell and he considers the complex and often problematic connections between theory and experiment In this first detailed scientific biography of Hertz and his scientific community Buchwald demonstrates that tacit knowledge can be recovered so that we can begin to identify the unspoken rules that govern scientific practice

Einstein's Revolution: A Study Of Theory Unification Rinat M. Nugayev, 2018-03-06 Einstein s Revolution A Study of Theory Unification gives students of physics and philosophy and general readers an epistemological insight into the genesis of Einstein s special relativity and its further unification with other theories The book starts with an introductory analysis of the reasons for mature theory change in science This leads to a discussion about special relativity genesis It is contended that Einstein s ingenious approach to special relativity creation substantially distinguishing him from Lorentz s and Poincar s invaluable impacts turns to be a milestone of maxwellian electrodynamics statistical mechanics and thermodynamics reconciliation design Special relativity turns out to be grounded on Einstein s breakthrough 1905 light quantum hypothesis Eventually the author amends the received view on the general relativity genesis by stressing that the main reason for Einstein s victory over the rival programmes of Abraham and Nordstr m was a unificationist character of Einstein s research programme

The Cambridge History of Science: Volume 5, The Modern Physical and Mathematical Sciences David C. Lindberg, Mary Jo Nye, Roy Porter, Ronald L. Numbers, 2003 A new and comprehensive examination of the history of the modern physical and mathematical sciences

Scientific Credibility and Technical Standards in 19th and early 20th century Germany and Britain Jed Z.

Buchwald, 2012-12-06 The articles in this first volume of ARCHIMEDES explicitly and intentionally cross boundaries between science and technology and they also illuminate one another The first three contributions concern optics and industry in 19th century Germany the fourth concerns electric standards in Germany during the same period the last essay in the volume examines a curious development in the early history of wireless signalling that took place in England and that has much to say about the establishment and enforcement of standard methods in a rapidly developing technology that emerged out of a scientific effect Historical work over the last few decades has shown that technology cannot be characterized simply or even usually as applied science The beliefs the devices and the natural objects that are created or discovered by scientists often

play altogether minor roles in the construction of technologies Taking this realization as a given the essays in Scientific Credibility and Technical Standards effectively argue that we must now seek to go beyond it we must also begin to think carefully about the role that science actually did play when it was explicitly deployed by technologists

Science in the 20th Century and Beyond Jon Agar, 2013-05-20 A compelling history of science from 1900 to the present day this is the first book to survey modern developments in science during a century of unprecedented change conflict and uncertainty The scope is global Science's claim to access universal truths about the natural world made it an irresistible resource for industrial empires ideological programs and environmental campaigners during this period Science has been at the heart of twentieth century history from Einstein's new physics to the Manhattan Project from eugenics to the Human Genome Project or from the wonders of penicillin to the promises of biotechnology For some science would only thrive if autonomous and kept separate from the political world while for others science was the best guide to a planned and better future Science was both a routine if essential part of an orderly society and the disruptive source of bewildering transformation Jon Agar draws on a wave of recent scholarship that explores science from interdisciplinary perspectives to offer a readable synthesis that will be ideal for anyone curious about the profound place of science in the modern world

from the natural and social sciences ranging from the 16th to the 20th centuries this book explores the ways in which scientific objects are both real and historical

From Natural Philosophy to the Sciences David Cahan, 2003-09-15

During the nineteenth century much of the modern scientific enterprise took shape scientific disciplines were formed institutions and communities were founded and unprecedented applications to and interactions with other aspects of society and culture occurred In this book eleven leading historians of science assess what their field has taught us about this exciting time and identify issues that remain unexamined or require reconsideration They treat both scientific disciplines biology physics chemistry the earth sciences mathematics and the social sciences in their specific intellectual and sociocultural contexts as well as the broader topics of science and medicine science and religion scientific institutions and communities and science technology and industry Providing a much needed overview and analysis of a rapidly expanding field *From Natural Philosophy to the Sciences* will be essential for historians of science but also of great interest to scholars of all aspects of nineteenth century life and culture Contributors Bernadette Bensaude Vincent Jed Z Buchwald David Cahan Joseph Dauben Frederick Gregory Michael Hagner Sungook Hong David R Oldroyd Theodore M Porter Robert J Richards Ulrich Wengenroth
