Gorilla Biology Andrea B. Taylor, Michele L. Goldsmith, 2002-12-05 Gorillas are one of our closest living relatives the largest of all living primates and teeter on the brink of extinction These fascinating animals are the focus of this in depth and comprehensive examination of gorilla biology Gorilla Biology combines recent research in morphology genetics and behavioural ecology to reveal the complexity and diversity of gorilla populations The first section focuses on morphological and molecular variation and underscores the importance of understanding diverse biological patterns at all levels in testing evolutionary and adaptive hypotheses and elucidating subspecies and species diversification Following are discussions of the ecological constraints that influence gorilla social organization and highlight their surprising flexibility The book ends with discussions of the conservation status of gorillas and the many and increasing threats to their

continued survival Giving insight into the evolutionary biology of these unique primates this book will be essential reading for primatologists anthropologists and evolutionary biologists *Craniodental Variation Among the Great Apes* Akiko Uchida,1996 As outspoken in his day as Richard Dawkins or Christopher Hitchens are today American freethinker and author ROBERT GREEN INGERSOLL 1833 1899 was a notorious radical whose uncompromising views on religion and slavery they were bad in his opinion women s suffrage a good idea he believed and other contentious matters of his era made him a wildly popular orator and critic of 19th century American culture and public life As a speaker dedicated to expanding intellectual horizons and celebrating the value of skepticism Ingersoll spoke frequently on such topics as atheism freedom from the pressures of conformity and the lives of philosophers who espoused such concepts This collection of his most famous speeches includes the lectures The Gods 1872 Humboldt 1869 Thomas Paine 1870 Individuality 1873 Heretics and Heresies 1874 □□□□ ,1996 Paleontology and Geology of Laetoli: Human Evolution in Context Terry Harrison,2011-01-27 This volume 2 and its companion volume 1 present the results of new investigations into the geology paleontology and paleoecology of the early hominin site of Laetoli in northern Tanzania The site is one of the most important paleontological and paleoanthropological sites in Africa worldrenowned for the discovery of fossils of the early hominin Australopithecus afarensis as well as remarkable trails of its footprints The first volume provides new evidence on the geology geochronology ecology ecomorphology and taphonomy of the site The second volume describes newly discovered fossil hominins from Laetoli belonging to Australopithecus afarensis and Paranthropus aethiopicus and presents detailed information on the systematics and paleobiology of the diverse associated fauna Together these contributions provide one of the most comprehensive accounts of a fossil hominin site and they offer important new insights into the early stages of human evolution and its context **International Journal of Primatology** ,2006 **American Journal of Physical Anthropology** Aleš Hrdlička,2003 Covers human evolution and variation including primate morphology physiology genetics adaptation growth development and behavior present and past Hominoid Evolution and Climatic Change in Europe: Volume 2 Louis de Bonis,George D. Koufos,Peter Andrews,2001-05-03 What is the place of Europe in the origin of humankind While our earliest human ancestors may have come out of Africa many of our more recent ancestors and those of other primates left their fossil remains in Europe and the Near East Hominoid primates including Dryopithecus in Spain and Hungary Oreopithecus in Italy and Ouranopithecus in Greece flourished in the Miocene approximately 10 7 million years ago This volume examines these and other hominoid fossils found in Eurasia and discusses what we can learn using biostratigraphic and ecological frameworks In addition new methods of analyzing and visualizing fossil hominoids are explored including CT based and computer assisted virtual reconstruction of fossils to allow three dimensional images of external and internal morphology of even fragmentary or distorted fossils This volume will be invaluable for practicing palaeoanthropologists and palaeontologists regardless of specialty *Orangutans* Serge A. Wich,uci Suci Utami

Atmoko,Tatang Mitra Setia,Carel P. van Schaik,2010-01-07 This book describes one of our closest relatives the orangutan and the only extant great ape in Asia It is increasingly clear that orangutan populations show extensive variation in behavioural ecology morphology life history and genes Indeed on the strength of the latest genetic and morphological evidence it has been proposed that orangutans actually constitute two species which diverged more than a million years ago one on the island of Sumatra the other on Borneo with the latter comprising three subspecies This book has two main aims The first is to carefully compare data from every orangutan research site examining the differences and similarities between orangutan species subspecies and populations The second is to develop a theoretical framework in which these differences and similarities can be explained To achieve these goals the editors have assembled the world s leading orangutan experts to rigorously synthesize and compare the data quantify the similarities or differences and seek to explain them Orangutans is the first synthesis of orangutan biology to adopt this novel comparative approach It analyses and compares the latest data developing a theoretical framework to explain morphological life history and behavioural variation Intriguingly not all behavioural differences can be attributed to ecological variation between and within the two islands relative rates of social learning also appear to have been influential The book also emphasizes the crucial impact of human settlement on orangutans and looks ahead to the future prospects for the survival of critically endangered natural populations
