Some of these nodes are larger and filled with a yellowish-gold color, while others are smaller and empty. The lines and nodes form a complex, interconnected web that resembles a molecular structure or a network diagram. The title 'CREATIONS OF FIRE' is centered in the upper half of the cover. 'CREATIONS' is in a white, sans-serif font. 'OF' is in a smaller, white, sans-serif font. 'FIRE' is in a larger, bold, black, sans-serif font. Below the title, there are two horizontal lines of small, white, vertical tick marks, resembling a ruler or a scale.

Creations Of Fire Chemistrys Lively History From Alchemy To The Atomic Age:

Creations Of Fire Cathy Cobb, Harold Goldwhite, 2009-04-27 In this fascinating history Cathy Cobb and Harold Goldwhite celebrate not only chemistry's theories and breakthroughs but also the provocative times and personalities that shaped this amazing science and brought it to life. Throughout the book the reader will meet the hedonists and swindlers, monks and heretics and men and women laboring in garages and over kitchen sinks who expanded our understanding of the elements and discovered such new substances as plastic, rubber and aspirin. *Creations of Fire* expands our vision of the meaning of chemistry and reveals the oddballs and academics who have helped shape our world.

Creations of Fire Cathy Cobb, Harold Goldwhite, 2013-07-30 The history of chemistry is a story of human endeavor and as erratic as human nature itself. Progress has been made in fits and starts and it has come from all parts of the globe. Because the scope of this history is considerable, some 100 000 years, it is necessary to impose some order and we have organized the text around three discernible albeit gross divisions of time. Part 1 Chaps 1-7 covers 100 000 B.E. Before Common Era to the late 1700s and presents the background of the Chemical Revolution. Part 2 Chaps 8-14 covers the late 1700s to World War I and presents the Chemical Revolution and its consequences. Part 3 Chaps 15-20 covers World War I to 1950 and presents the Quantum Revolution and its consequences and hints at revolutions to come. There have always been two tributaries to the chemical stream: experiment and theory. But systematic experimental methods were not routinely employed until the 1600s and quantitative theories did not evolve until the 1700s and it can be argued that modern chemistry as a science did not begin until the Chemical Revolution in the 1700s.

xi xii PREFACE We argue however that the first experiments were performed by artisans and the first theories proposed by philosophers and that a revolution can be understood only in terms of what is being revolted against.

The Story of Chemistry N. C. Datta, 2005 Chemistry touches every aspect of our life but we are largely ignorant of it. A general reader has access to many popular books in the various areas of physics and astronomy but in the area of chemistry there is virtually no accessible material. One common perception is that chemistry is a difficult subject which is partially true.
