Benjamin Falchuk,Adérito Fernandes-Marcos,2015 Creativity, Inc. by Ed Catmull: A 30-minute Summary Instaread Summaries,2014-10-21 PLEASE NOTE This is a summary of the book and NOT the original book Creativity Inc by Ed Catmull A 30 minute Summary Inside this Instaread Summary Overview of the entire bookIntroduction to the Important people in the bookSummary and analysis of all the chapters in the bookKey Takeaways of the bookA Reader s Perspective Preview of this summary Chapter 1 Every Sunday as a kid Catmull watched on TV The Wonderful World of Disney where Disney explained how they made their animations and incorporated technological breakthroughs into their work One day Catmull had a life changing realization a good animation was measured by whether or not the character on the screen made you believe it was a thinking being He decided he wanted to become an animator and create emotional characters Catmull graduated with a double major in Physics and Computer Science from the University of Utah In his graduate program he met professor Ivan Sutherland a pioneer in computer graphics and director of the computer graphics program The program was funded by the Advanced Research Projects Agency ARPA the creators of the first computer network ARPANET which would later evolve into the Internet ARPA was developed as a response to the threat of the Soviet Sputnik satellite the first of its kind The U S felt threatened by Soviet technological advancements and they developed ARPA to stay up with the Soviets To Catmull the lesson to be learned from this was when the competition gets smart you need to get smarter Catmull found enormous inspiration in the computer graphics program not only from the technology he was discovering but also from his fellow students The collaborative and creative atmosphere he experienced there was something he later tried to emulate at Pixar In 1972 Catmull made his first animated film a digitized model of his left hand Hand became a reference for state of the art computer animation Professor Sutherland came up with the idea of an exchange program with Disney Disney would send an animator to the University of Utah to learn about new technologies and the university would send one of their students to learn about storytelling Catmull was sent to propose Computers in Art, Design and Animation John Lansdown,Rae Earnshaw,1989-08-23 The collection of papers that makes up this book arises largely from the joint activities of two specialist groups of the British Computer Society namely the Displays Group and the Computer Arts Society Both these groups are now more than 20 years old and during the whole of this time have held regular separate meetings In recent years however the two groups have held a joint annual meeting at which presentations of mutual interest have been given and it is mainly from

the last two of these that the present papers have been drawn They fall naturally into four classes visualisation art design and animation although as in all such cases the boundaries between the classes are fuzzy and overlap inevitably occurs

Visualisation The graphic potential of computers has been recognised almost since computing was first used but it is only comparatively recently that their possibilities as devices for the visualisation of complex and largely abstract phenomena has begun to be more fully appreciated Some workers stress the need to be able to model photographic reality in order to assist in this task They look to better algorithms and more resolution to achieve this end Others Alan Mackay for instance suggest that it is not just a matter of providing more and more pixels It is a matter of providing congenial clues which employ to the greatest extent what we already know *International Journal of Creative Interfaces and Computer Graphics, Vol 3 Iss 2*
