Artificial Intelligence and Literary Creativity Selmer Bringsjord, David Ferrucci, 1999-09-01 Is human creativity a wall that AI can never scale Many people are happy to admit that experts in many domains can be matched by either knowledge based or sub symbolic systems but even some AI researchers harbor the hope that when it comes to feats of sheer brilliance mind over machine is an unalterable fact In this book the authors push AI toward a time when machines can autonomously write not just humdrum stories of the sort seen for years in AI but first rate fiction thought to be the province of human genius It reports on five years of effort devoted to building a story generator the BRUTUS 1 system This book was written for three general reasons The first theoretical reason for investing time money and talent in the quest for a truly creative machine is to work toward an answer to the question of whether we ourselves are machines The second theoretical reason is to silence those who believe that logic is forever closed off from the emotional world of creativity The practical rationale for this endeavor and the third reason is that machines able to work alongside humans in arenas calling for creativity will have incalculable worth

Creativity and Artificial Intelligence Francisco Câmara Pereira, 2008-08-27 Creativity and Artificial Intelligence A Conceptual Blending Approach takes readers into a computationally plausible model of creativity Inspired by a thorough analysis of work on creativity from the areas of philosophy psychology cognitive science cognitive linguistics and artificial intelligence the author deals with the various processes principles and representations that lie underneath the act of creativity Focusing on Arthur Koestler s Bisociations which eventually lead to Turner and Fauconnier s conceptual blending framework the book proposes a theoretical model that considers blends and their emergent structure as a fundamental cognitive mechanism The author thus discusses the computational implementation of several aspects of conceptual blending theory namely composition completion elaboration frames and optimality constraints Informal descriptions and examples are supplied to provide non computer scientists as well as non cognitive linguists with clear

insights into these ideas Several experiments are made and their results are discussed with particular emphasis on the validation of the creativity and conceptual blending aspects Written by a researcher with a background in artificial intelligence the book is the result of several years of exploration and discussion from different theoretical perspectives As a result the book echoes some of the criticism made on conceptual blending and creativity in artificial intelligence and thus proposes improvements in both areas with the aim of being a constructive contribution to these very intriguing yet appealing research orientations

The Other Digital China Jing Wang, 2019-12-10 A scholar and activist tells the story of change makers operating within the Chinese Communist system whose ideas of social action necessarily differ from those dominant in Western liberal societies The Chinese government has increased digital censorship under Xi Jinping Why Because online activism works it is perceived as a threat in halls of power In The Other Digital China Jing Wang a scholar at MIT and an activist in China shatters the view that citizens of nonliberal societies are either brainwashed or complicit either imprisoned for speaking out or paralyzed by fear Instead Wang shows the impact of a less confrontational kind of activism Whereas Westerners tend to

equate action with open criticism and street revolutions Chinese activists are building an invisible and quiet coalition to bring incremental progress to their society Many Chinese change makers practice nonconfrontational activism They prefer to walk around obstacles rather than break through them tactfully navigating between what is lawful and what is illegitimate The Other Digital China describes this massive gray zone where NGOs digital entrepreneurs university students IT companies like Tencent and Sina and tech communities operate They study the policy winds in Beijing devising ways to press their case without antagonizing a regime where taboo terms fluctuate at different moments What emerges is an ever expanding networked activism on a grand scale Under extreme ideological constraints the majority of Chinese activists opt for neither revolution nor inertia They share a mentality common in China rules are meant to be bent if not resisted *You Are Creative* Dr. YKK,2013-01-09 Do you want to uncover the greatest secret about creativity that will instantly transform you into creative person Then this book is for you This extraordinary book written for the entire family provides you with the key to unlock the hidden treasures of your mind A single idea from this book may ignite a spark that could revolutionize your life Written in a unique inimitable style the book takes you to tantalizing journey of discovery entertainment amazement and awakening through its well crafted practical and inspirational principles illustrated by captivating stories that capture your imagination In fact once you started you may not be able to put the book down Dr YKK breaks new ground on simplicity in applying creativity techniques Through his research he pioneers what he calls the Three Primary Creativity techniques With these techniques switching on your creative brain is a breeze The provocative Mindxercises at the end of every bloom chapter stimulates into you to look at any new situation from a new perspective Another benefit is that these Mindxercises provide creative entertainment and togetherness for your whole family Reading this book is an exhilarating and unforgettable Mind Unzipping experience It will make a positive difference to your life Dimensions of Creativity Margaret A. Boden,1996 Dimensions of Creativity brings together original articles that draw on a range of discipline from the history and sociology of science psychology philosophy and artificial intelligence to ask how creative ideas arise and whether creativity can be objectively defined and measured Dimensions of Creativity brings together original articles that draw on a range of disciplines from the history and sociology of science psychology philosophy and artificial intelligence to ask how creative ideas arise and whether creativity can be objectively defined and measured Margaret Boden and her colleagues Simon Schaffer Gerd Gigerenzer David N Perkins Howard Gardner Colin Martindale and Hans J Eysenck demonstrate that creativity requires not only challenging new ideas but their acceptance by some relevant social group Although some new ideas can arise as novel associations others are generated by exploiting structural features of an existing conceptual space Strong motivations often drive the creators and those who evaluate and perpetuate their work The seven essays although very different are complementary The book can serve as an up to date introduction to the study of creativity in various disciplines The many references provide a way into the relevant literature A Bradford Book Boredom, Shanzhai, and Digitisation in

Creativity in Human

Evolution and Prehistory Steven Mithen,2005-08-10 We live in a world surrounded by remarkable cultural achievements of human kind Almost every day we hear of new innovations in technology in medicine and in the arts which remind us that humans are capable of remarkable creativity But what is human creativity The modern world provides a tiny fraction of cultural diversity and the evidence for human creativity far more can be seen by looking back into prehistory The book examines how our understanding of human creativity can be extended by exploring this phenomenon during human evolution and prehistory The book offers unique perspectives on the nature of human creativity from archaeologists who are concerned with long term patterns of cultural change and have access to quite different types of human behaviour than that which exists today It asks whether humans are the only creative species or whether our extinct relatives such as Homo habilis and the Neanderthals also displayed creative thinking It explores what we can learn about the nature of human creativity from cultural developments during prehistory such as changes in the manner in which the dead were buried monuments constructed and the natural world exploited In doing so new light is thrown on these cultural developments and the behaviour of our prehistoric ancestors By examining the nature of creativity during human evolution and prehistory these archaeologists supported by contributions from psychology computer science and social anthropology show that human creativity is a far more diverse and complex phenomena than simply flashes of genius by isolated individuals Indeed they show that unless perspectives from prehistory are taken into account our understanding of human creativity will be limited and incomplete
