

The orbit of the MOON

Lunar month

The Moon completes one orbit around the Earth (a sidereal month), in 27.3 days. Because the Earth is also orbiting the Sun, it takes two more days for the Moon to complete its cycle of phases (a synodic month).

Elliptical orbit

The Moon's orbit has an elliptical (oval) shape, although it looks almost like a circle.

Apsidal precession

The Moon's elliptical orbit orientation changes its orientation, or precesses, with a period of 8.85 years.

Drifting away

Every year the Moon's orbit is expanding, taking it farther away from Earth by an average of 3.8 centimeters.

Nodal precession

The plane of the lunar orbit is tilted 5 degrees relative to Earth's orbit around the Sun. It precesses in an 18.6-year cycle.

Having been fired out of the giant Columbiad space gun the Baltimore Gun Club's bullet-shaped projectile along with its three passengers Barbicane, Nicholl, and Michel Ardan begins the five-day trip to the moon. [All Around the Moon](#) Jules Verne, 2019-03-05 A few years ago the world was suddenly astounded by hearing of an experiment of a most novel and daring nature altogether unprecedented in the annals of science. The BALTIMORE GUN CLUB, a society of artillerymen started in America during the great Civil War, had conceived the idea of nothing less than establishing direct communication with the Moon by means of a projectile. President Barbican, the originator of the enterprise, was strongly encouraged in its feasibility by the astronomers of Cambridge Observatory and took upon himself to provide all the means necessary to secure its success. Having realized by means of a public subscription the sum of nearly five and a half millions of dollars, he immediately set himself to work at the necessary gigantic labors. In accordance with the Cambridge men's note, the cannon intended to discharge the projectile was to be planted in some country not further than 28° north or south from the equator so that it might be aimed vertically at the Moon in the zenith. The bullet was to be animated with an initial velocity of 12 000 yards to the second. It was to be fired off on the night of December 1st at thirteen minutes and twenty seconds before eleven o'clock precisely. Four days afterwards it was to hit the Moon at the very moment that she reached her perigee, that is to say her nearest point to the Earth, about 228 000 miles distant. *All Around the Moon* Jules Verne, 2020-06-28 Jules Verne was born

in 1828 in France His dream was to write a new kind of novel which combined scientific fact with fiction Verne eventually wrote 40 novels in his Voyages extraordinaires series What one man can imagine another will someday be able to achieve Is a quote from an article in the Encyclopedia Britannica that sums up Verne so well In All Around the Moon three space travelers are conversing about science and mathematics They decide to alter the course of their projectile which leads to unanticipated results Extract The moment that the great clock belonging to the works at Stony Hill had struck ten Barbican Ardan and M Nicholl began to take their last farewells of the numerous friends surrounding them The two dogs intended to accompany them had been already deposited in the Projectile The three travellers approached the mouth of the enormous cannon seated themselves in the flying car and once more took leave for the last time of the vast throng standing in silence around them The windlass creaked the car started and the three daring men disappeared in the yawning gulf The trap hole giving them ready access to the interior of the Projectile the car soon came back empty the great windlass was presently rolled away the tackle and scaffolding were removed and in a short space of time the great mouth of the Columbiad was completely rid of all obstructions
