Style in the Technical and Tectonic Arts, Or, Practical Aesthetics

Gottfried Semper,2004 The enduring influence of the architect Gottfried Semper 1803 1879 derives primarily from his monumental theoretical foray *Der Stil in der technischen und tektonischen K nsten* 1860 62 here translated into English for the first time A richly illustrated survey of the technical arts textiles ceramics carpentry masonry Semper s analysis of the preconditions of style forever changed the interpretative context for aesthetics architecture and art history Style Semper believed should be governed by historical function cultural affinities creative free will and the innate properties of each medium Thus in an ambitious attempt to turn nineteenth century artistic discussion away from historicism aestheticism and materialism Semper developed in *Der Stil* a complex picture of stylistic change based on scrutiny of specific objects and a remarkable grasp of cultural variety Harry Francis Mallgrave s introductory essay offers an account of Semper s life and work a survey of *Der Stil* and a fresh consideration of Semper s landmark study and its lasting significance

Tectonic Affects in Contemporary Architecture

Yonca Hurol,2022-09-28 Tectonics is an old ontological concept which simultaneously claims to cover the aesthetics meaning and the technological technical in architecture However since the advent of modernity the relationship between architecture and building technology has been problematic Some of these problems which are reflected in the theories of architecture and tectonics relate to the separation of the technology technical dimension from the aesthetic artistic rendering one of them dominant over the other This book explores the tectonic affects in architecture because these do not separate building technology and aesthetics or meaning Affects are preconscious aesthetic feelings which can cause meanings if we start thinking about these affects The book claims that tectonic affects can generate aesthetic value and meaning It adopts a practical position towards architectural aesthetics and meaning and concentrates on tectonic affects

Introducing Architectural Tectonics

Chad Schwartz,2016-10-04 Introducing Architectural Tectonics is an exploration of the poetics of construction Tectonic theory is an integrative philosophy examining the relationships formed between design construction and space while creating or experiencing a work of architecture In this text author Chad Schwartz presents an introductory investigation into tectonic theory subdividing it into distinct concepts in order to make it accessible to beginning and advanced students alike The book centers on the tectonic analysis of twenty contemporary works of architecture located in eleven countries including Germany Italy United States Chile Japan Bangladesh Spain and Australia and designed by such notable architects as Tadao Ando Herzog de Meuron Kengo Kuma Olson Kundig and Peter Zumthor Although similarities do exist between the projects their distinctly different characteristics location and climate context size program construction methods and range of interpretations of tectonic expression provide the most significant lessons of the book helping you to understand tectonic theory Written in clear accessible language these investigations examine the poetic creation of architecture showing you lessons and concepts that you can integrate into your

own work whether studying in a university classroom or practicing in a professional office *Studies in Tectonic Culture* Kenneth Frampton, 2001-08-24 Composed of ten essays and an epilogue that trace the history of contemporary form as an evolving poetic of structure and construction the book's analytical framework rests on Frampton's close readings of key French and German and English sources from the eighteenth century to the present Kenneth Frampton's long awaited follow up to his classic *A Critical History of Modern Architecture* is certain to influence any future debate on the evolution of modern architecture *Studies in Tectonic Culture* is nothing less than a rethinking of the entire modern architectural tradition The notion of tectonics as employed by Frampton the focus on architecture as a constructional craft constitutes a direct challenge to current mainstream thinking on the artistic limits of postmodernism and suggests a convincing alternative Indeed Frampton argues modern architecture is invariably as much about structure and construction as it is about space and abstract form Composed of ten essays and an epilogue that trace the history of contemporary form as an evolving poetic of structure and construction the book's analytical framework rests on Frampton's close readings of key French and German and English sources from the eighteenth century to the present He clarifies the various turns that structural engineering and tectonic imagination have taken in the work of such architects as Perret Wright Kahn Scarpa and Mies and shows how both constructional form and material character were integral to an evolving architectural expression of their work Frampton also demonstrates that the way in which these elements are articulated from one work to the next provides a basis upon which to evaluate the works as a whole This is especially evident in his consideration of the work of Perret Mies and Kahn and the continuities in their thought and attitudes that linked them to the past Frampton considers the conscious cultivation of the tectonic tradition in architecture as an essential element in the future development of architectural form casting a critical new light on the entire issue of modernity and on the place of much work that has passed as avant garde A copublication of the Graham Foundation for Advanced Studies and The MIT Press **The Stone and the Thread** César

Paternosto, 1996-01-01 Shows that precolumbian tectonic forms especially as found in sculpture and weaving appear to be an overlooked source or anticipation of much of the art of the 20th century Second part of book deals with artifacts as American art and addresses reception of ancient tectonics in the 20th century Emphasizes intense relationship that some members of the New York School particularly Barnett Newman and Adolph Gottlieb had during 1940s with the aboriginal arts of the North American part of the hemisphere and thus the affinities between their work and the work of the older Torres García in Montevideo at the other end of the continent *Handbook of Latin American Studies* v 58 **A History of Installation Art and the Development of New Art Forms** Faye Ran, 2009 Art mirrors life life returns the favor How could nineteenth and twentieth century technologies foster both the change in the world view generally called postmodernism and the development of new art forms Scholar and curator Faye Ran shows how interactions of art and technology led to cultural changes and the evolution of Installation art as a genre unto itself a fascinating hybrid of expanded sculpture in terms of

Documents Carl Einstein in, 2002-10-29 The short lived art magazine Documents 1929 30 has since the eighties become an object of increasing fascination to art historians and students of French intellectual culture The light shed on Documents has not however dispelled the sense of mystery surrounding its two years of exuberant production and sudden demise What actually happened The main figure associated with the magazine has been the writer Georges Bataille but a German novelist and art historian Carl Einstein was also centrally involved What was he doing in Documents and why has he disappeared from the picture This book traces Einstein s role detailing his charged collaboration with the younger Bataille which contributed to Documents collapse

Tectonics as a Process in Architecture Yonca Hurol, 2025-07-22 Detailed research based review of the intersection of building processes and tectonics with case studies and theoretical reflections Tectonics as a Process in Architecture explores the dynamic nature of building processes and their impact on architectural tectonics Detailed case studies and theoretical reflections are included to help readers see how recognizing tectonics as a process can be beneficial The book is based on research that was conducted to document all changes during the building processes of a house through close engagement between the researcher and the building the researcher was also the building s owner a neighbor to it its architect and a construction control This close connection enabled the capture of numerous changes some resulting in tectonic affects while others reflected innovative approaches These changes were introduced by various actors in the process including contractors builders and foremen In Tectonics as a Process in Architecture readers will find Invaluable insights on why tectonics is not merely as an outcome but an inclusive collaborative process that enhances architectural quality Two process maps one for tectonic affects and one for innovative approaches Evolving changes during construction and their potential to foster innovation A theory on procedural and inclusive tectonics primarily focused on details Due to its multifaceted nature Tectonics as a Process in Architecture will appeal to academics students and professionals interested in the intersection of architectural engineering construction and tectonic principles

Allied Arts Sandra Alföldy, 2012 Considering a wide range of craftspeople materials and forms The Allied Arts investigates the history of the complex relationship between craft and architecture by examining the intersection of these two areas in Canadian public buildings

Installations by Architects Sarah Bonnemaïson, Ronit Eisenbach, 2009-08-12 Over the last few decades a rich and increasingly diverse practice has emerged in the art world that invites the public to touch enter and experience the work whether it is in a gallery on city streets or in the landscape Like architecture many of these temporary artworks aspire to alter viewers experience of the environment An installation is usually the end product for an artist but for architects it can also be a preliminary step in an ongoing design process Like paper projects designed in the absence of real architecture installations offer architects another way to engage in issues critical to their practice Direct experimentation with architecture s material and social dimensions engages the public around issues in the built environment that concern them

and expands the ways that architecture can participate in and impact people's everyday lives. The first survey of its kind, *Installations by Architects* features fifty of the most significant projects from the last twenty-five years by today's most exciting architects including Anderson, Anderson, Philip Beesley, Diller, Scofidio, John Hejduk, Dan Hoffman, and Kuth Ranieri. Architects' Projects are grouped in critical areas of discussion under the themes of tectonics, body, nature, memory, and public space. Each project is supplemented by interviews with the project architects and the discussions of critics and theorists situated within a larger intellectual context. There is no doubt that installations will continue to play a critical role in the practice of architecture. *Installations by Architects* aims to contribute to the role of installations in sharpening our understanding of the built environment.

Architecture and Spectacle Gevork Hartoonian, 2012. Focusing on six leading contemporary architects: Peter Eisenman, Frank Gehry, Bernard Tschumi, Zaha Hadid, Rem Koolhaas, and Steven Holl, this book puts forward a unique and insightful analysis of neo-avant-garde architecture. It discusses the spectacle and excess which permeates contemporary architecture in reference to the present aesthetic tendency for image-making but does so by applying the tectonic of theatricality discussed by the nineteenth-century German architect Gottfried Semper. In doing so, it breaks new ground by opening up a dialogue between the study of the past and the design of the present.

Principles of Art History Heinrich Wölfflin, 2015-05-07. *Principles of Art History* by Heinrich Wölfflin (1864-1945) is a revolutionary attempt to construct a science of art through the study of the development of style. It has been a foundational work of formalist art history since it was first published in 1915. At once systematic and subjective and remarkable for its compelling descriptions of works of art, Wölfflin's text has endured as an accessible yet rigorous approach to the study of style. Although Wölfflin applied his analysis to objects of early modern European art, *Principles of Art History* has been a fixture in the theoretical and methodological debates of the discipline of art history and has found a global audience. With translations in twenty-four languages and many reprints, Wölfflin's work may be the most widely read and translated book of art history ever. This new English translation, appearing one hundred years after the original publication, returns readers to Wölfflin's 1915 text and images. It also includes the first English translations of the prefaces and afterword that Wölfflin himself added to later editions. Introductory essays provide a historical and critical framework, referencing debates engendered by *Principles* in the twentieth century for a renewed reading of the text in the twenty-first.

Contemporary Architecture and Urbanism in Iran M. Reza Shirazi, 2018-01-02. This book presents an in-depth critical analysis of the internationally recognized place-specific works of three Iranian architects: Nader Ardalan, Kamran Diba, and Hossein Amanat during the 60s and 70s and their significant contribution to the emerging anti-modernist discourse. It argues that from the mid-19th century onwards, architecture and urban design in Iran has been oscillated between two extremes of modernity and tradition. Drawing on the theory of critical regionalism, Kenneth Frampton, the book critically analyses writings and works of the above-mentioned architects and contends that they created a space in between which unified two extremes of tradition and modernity in a creative way. Khalq

i Jadid New Creation The book also contains three in depth interviews with architects to discuss their singular narrative of the creation of in between A concluding chapter addresses the promises of critical regionalist architecture and urban design in post Revolutionary Iran as well as the Middle East where the dichotomy of tradition and modernity is yet a valid account
