La ciudad y el medio natural José Fariña Tojo, 2001-02-26 Ante este nuevo siglo se plantea la conveniencia de que en los procesos de urbanización regidos por el planteamiento no sólo se consideren variables económicas sociales o artísticas sino también y de forma preferente las cuestiones relativas al Medio Ambiente Se ha hecho acuciante la necesidad de que planificadores arquitectos y urbanistas pongan en un lugar destacado dentro de sus prioridades la consideración por la Naturaleza Con este libro se pretende ayudar a la formación de los profesionales encargados de llevar a cabo el proceso de construcción de la ciudad introduciendo los temas ambientales aplicados a sus intereses específicos

Climatología urbana María del Carmen Moreno García, 1999-10-26 El conocimiento y evaluación de los cambios a escala microclimática singularmente los que se producen en las ciudades son de vital importancia En el texto se recogen las principales modificaciones que sufren los distintos elementos climáticos temperatura humedad precipitación y viento por causa de la urbanización fijando la atención especialmente en uno de los fenómenos más característicos del clima urbano como son las islas de calor También se señalan las diferentes metodologías y técnicas para el estudio del clima urbano así como la utilidad y aplicaciones del mismo El texto se acompaña de una serie de ejercicios prácticos y abundante información bibliográfica y direcciones de interés en internet

El cambio climático y el sector energético Diego Fernando Otero Prada, 2023-06-16 Este libro presenta una discusión sobre temas que tienen que ver con el cambio climático y el sector energético centrado en Colombia y además se introducen

discusiones sobre los modelos de desarrollo y la ecología El principal mensaje es que no se puede confundir a Colombia con el resto del mundo por las especificidades del país a diferencia de los países desarrollados El principal argumento es que en Colombia el sector eléctrico emite pocos gases de efecto invernadero un 4.5% del total mientras que el sector agropecuario y el uso del suelo explican 45% en especial la deforestación con un 20% De ahí que los esfuerzos deben dedicarse a los sectores donde se causan más emisiones de gases de efecto invernadero Se critica el énfasis en el sector eléctrico cuando aquí no es el problema ya que la generación de energía eléctrica es 70% producida por hidroeléctricas por lo cual centrarse en energía solar y eólica es exagerado Se argumenta que el país debe tener una política industrial basada en el sector energético para que no se siga dependiendo tecnológicamente del exterior cuando podrá pensarse en tener fábricas de paneles solares y aerogeneradores Enfatiza que hay que usar el potencial hidroeléctrico de Colombia que es enorme Se analiza el consumo de energía por sectores mostrando que se exagera también el efecto del sector transporte en las emisiones que explica el 15% de las mismas cuando en los países desarrollados es más del 30% y que la electrificación del transporte es un objetivo de décadas Define que hay que eliminar el consumo de combustible y de carbón en forma inteligente y sin causar desequilibrios económicos jurídicos y sociales Finaliza con un análisis de la compra de ISA empresa de transmisión de energía a eléctrica de alto voltaje por Ecopetrol y desenmascara todos los argumentos equivocados que se dieron para justificar esta compra
