Phenotyping at Plant and Cell

Levels: The Quest for Tolerant Crop Development, volume II Ulrich Schurr, Carla Pinheiro, Dionysia Apostolos Fasoula, Estelle Goulas, Sebastien Christian Carpentier, Astrid Junker, 2023-11-22 This Research Topic is part of the Phenotyping at Plant and Cell Levels The Quest for Tolerant Crop Development series Phenotyping at Plant and Cell Levels The Quest for Tolerant Crop Development This Research Topic aims at accelerating the discovery of crop varieties that are able to withstand environmental stresses via the use of phenotyping approaches at the plant and cellular levels Climate change is expected to have a drastic impact on agriculture notably by impacting water availability precipitations temperatures soil nutrients and the incidence of diseases and pests A better use of plant genetic resources and plant breeding are key to tackling this challenge from climate change and for food security Many landraces and wild relatives of crops are conserved in seed and gene banks These collections are potentially valuable for breeders but are presently underexploited Moreover the contribution of the soil microbiome to enhance the performance of specific plant genotypes has been overlooked The aim is to generate crops that are resistant against biotic stress or can tolerate abiotic stress without significant impact on their performance Current studies in the field of sensor technologies and phenomics are mainly empirically based and do not link the phenotypic parameters to the molecular scale Similarly many molecular studies do not correlate their findings to the whole plant phenotype The quantitative high throughput analysis of crop potential and behavior during stress is a form of Genotype x Environment interaction and is a major bottleneck We urgently need to

identify resilient genotypes and to understand the underlying mechanisms of this resilience Phenotyping science is quickly developing to characterize plant behavior its dynamic dimensions and to quantify features such as growth and stress resilience which increasingly permit to link the phenotype to genetic control
