Anthropology And Historiography Of Science:

Anthropology and Historiography of Science Debi Prasad Chattopadhyaya, 1990 Whether history or anthropology is the most fundamental social science remains still a controversial and undecided issue For a proper understanding of this instructive controversy the presuppositions of these two disciplines need to be critically and philosophically reviewed Otherwise the true perspective of the controversy remains undisclosed and therefore unintelligible A close and comprehensive understanding of language as the basic form of the life world provides the cues necessary to show correctly the complementary relation between anthropology and history That synchronic or sociological and diachronic or historical perspectives of science are mutually supportive ways of representing the same social activities has been persuasively argued in this book Chattopadhyaya has pointedly examined in this connection the conflicting views of Sartre and Levi Strauss Also he has selectively drawn upon critically assessed and brought the theories of Husserl Heidegger Popper Quine and Kuhn to bear upon the problem The author's conclusion centers around his own concept of human universals The positive thesis of the book rejects the trichotomy of three cultures scientific humanistic and technological That this view is not a theoretical creature but a historical and cultural finding has been plausibly reasoned by Chattopadhyaya The main trend of his reasoning clearly shows that the gulf between analytic philosophers and phenomenologists is either imaginary or highly exaggerated In this specific case the author a student of Popper perceptively argues to the effect that if theorizations is primarily problem oriented rather than school based one can see one's way to rational solution in the convergent light of different but affine human or cultural origins But his presentation and assessment of the views and arguments of Husserl Popper Quine and Kuhn are likely to prove controversial

Centering the Margins of Anthropology's History Regna Darnell, 2021-05

The series *Histories of Anthropology Annual* presents diverse perspectives on the discipline's history within a global context with a goal of increasing the awareness and use of historical approaches in teaching, learning, and conducting anthropology. The series includes critical, comparative, analytical, and narrative studies involving all aspects and subfields of anthropology. Volume 14, *Centering the Margins of Anthropology's History*, focuses on the conscious recognition of margins and suggests it is time to bring the margins to the center both in terms of a changing theoretical openness and a supporting body of scholarship, if not to problematize the very dichotomy of center and margins itself. The essays explore two major themes of anthropology's margins: First, anthropologists and historians have long sought out marginalized and forgotten ancestors, arguing for their present-day relevance and offering explanations for the lack of attention to their contributions to theory, analysis, methods, and findings. Second, anthropologists and their historians have explored a range of genres to present their results in provocative and open-ended formats. This volume closes with an experimental essay that offers a dynamic, multifaceted perspective that captures one of the dominant, if sometimes marginalized, voices in the history of anthropology: Steven O. Murray's career, developed at the institutional margins of several academic disciplines and activist discourses, but his distinctive voice has been and will remain at the center of our history.

The Muse of History and the Science of Culture Robert L. Carneiro, 2007-05-08

Is history more than, in Boswell's words, a chronological series of remarkable events? Does it have a pattern? Is it fraught with meaning? Can we discern its trends? What determines its course? In short, can a substantial and coherent philosophy of history be devised that offers answers to these questions? These issues, which have intrigued and bedeviled historians for centuries, are explored in this thoughtful book.

New Directions in Anthropology and Environment Carole L. Crumley, 2002-05-09

Carole L. Crumley has brought together top scholars from across anthropology in a benchmark volume that displays the range of exciting new work on the complex relationship between humans and the environment. Continually pursuing anthropology's persistent claim that both the physical and the mental world matter, these environmental scholars proceed from the holistic assumption that the physical world and human societies are always inextricably linked. As they incorporate diverse forms of knowledge, their work reaches beyond anthropology to bridge the sciences, social sciences, and the humanities, and to forge working relationships with non-academic communities and professionals. Theoretical issues such as the cultural dimensions of context, knowledge, and power are articulated alongside practical discussions of building partnerships, research methods, and ethics, and strategies for implementing policy. *New Directions in Environment and Anthropology* will be important for all scholars and non-academics interested in the relation between our species and its biotic and built environments. It is also designed for classroom use in and beyond anthropology, and students will be greatly assisted by suggested reading lists for their further exploration of general concepts and specific research. A History of Anthropology as a Holistic Science Glynn

Custred,2016-04-27 A History of Anthropology as a Holistic Science defends the holistic scientific approach by examining its history which is in part a story of adventure and its sound philosophical foundation It shows that activism and the holistic scientific approach need not compete with one another This book discusses how anthropology developed in the nineteenth century during what has been called the Second Scientific Revolution It emerged in the United States in its holistic four field form from the confluence of four lines of inquiry the British the French the German and the American As the discipline grew and became more specialized a tendency of divergence set in that weakened its holistic appeal Beginning in the 1960s a new movement arose within the discipline which called for abandoning science as anthropology's mission in order to convert into an instrument of social change a redefinition which weakens its effectiveness as a way of understanding humankind and which threatens to discredit the discipline

Fishers and Scientists in Modern Turkey Ståle Knudsen,2009 Through the ethnography and history of fish production seafood consumption state modernizing policies and marine science this book analyzes the role of local knowledge in the management of marine resources on the Eastern Black Sea coast of Turkey Fishing science and other ways of knowing and relating to fish and the sea are analyzed as particular ways of life conditioned by history ideology and daily practice The approach adopted here allows for a broader analysis of the role knowledge plays in the management of common pool resources CPR than is provided in much of the contemporary CPR debate that tends to have a somewhat narrow focus on institutions and rules By contrast the author argues that also local knowledge and the larger historical and ideological context of production as manifest in state modernization policies and consumption patterns should be taken into account when trying to explain the current management regime in Turkish Black Sea fisheries

A Study of History: Volume I: Abridgement of Volumes I-VI Arnold J. Toynbee,1987 Toynbee's analysis of the rise and fall of civilizations has been acknowledged as an achievement without parallel in modern scholarship This abridgement preserves its method atmosphere texture and for the most part the author's very words

The Ethnographer's Magic and Other Essays in the History of Anthropology George W. Stocking,1992 George Stocking has been widely recognized as the premier historian of anthropology ever since the publication of his first volume of essays Race Culture and Evolution in 1968 As editor of several publications including the highly acclaimed History of Anthropology series he has led the movement to establish the history of anthropology as a recognized research specialization In addition to the study Victorian Anthropology his work includes numerous essays covering a wide range of anthropological topics The eight essays collected in The Ethnographer's Magic consider the emergence of anthropology since the late nineteenth century as an academic discipline grounded in systematic fieldwork Drawing extensively on unpublished manuscript materials the essays focus primarily on Franz Boas and Bronislaw Malinowski the leading figures in the American and the British academic fieldwork traditions According to George Marcus of Rice University the essays represent the most informative and insightful writings

on Malinowski and Boas and their legacies that are yet available Beyond their biographical material the essays here touch upon major themes in the history of anthropology its powerfully mythic aspect and persistent strain of romantic primitivism the contradictions of its relationship to the larger sociopolitical sphere its problematic integration of a variety of natural scientific and humanistic inquiries and the tension between its scientific aspirations and its subjectively acquired data To provide an overview against which to read the other essays Stocking has also included a sketch of the history of anthropology from the ancient Greeks to the present For this collection Stocking has written prefatory commentaries for each of the essays as well as two more extended contextualizing pieces An introductory essay Retrospective Prescriptive Reflections places the volume in autobiographical and historiographical context the Afterword Postscriptive Prospective Reflections reconsiders major themes of the essays in relation to the recent past and present situation of academic anthropology

U.S. Museum Histories and the Politics of Interpretation Laura Schiavo, 2023-12-08 U S Museum Histories and the Politics of Interpretation is the first collection to examine the history of museums in the United States through the lens of the political and ideological underpinnings at the heart of exhibitions collecting and programming Including contributions from historians art historians anthropologists academics and museum professionals the book argues that museums have always been embedded in the politics and culture of their time whether that means a reification of hegemonic notions of race gender and progress or a challenge to those normative structures Contributions probe the political nature of collection and interpretation as concept and practice and museum work as both reflective of and contributing to the politics and circulation of power in different historical moments As a whole the volume provides detailed readings of museums that demonstrate the ways in which these trusted cultural institutions have intervened in shifting concepts of nation community indigeneity race citizenship inclusion identity localism and memory U S Museum Histories and the Politics of Interpretation makes arguments about the historically and politically rooted nature of cultural production in museums that apply to institutions across the globe It is essential reading for students and scholars of museum studies public history cultural history art history and memory

Sciences and Cultures E. Mendelsohn, Y. Elkana, 2012-12-06 Anthropological approaches to the sciences have developed as part of a broader tradition concerned about the place of the sciences in today's world and in some basic sense concerned with questions about the legitimacy of the sciences In the years since the second World War we have seen the emergence of a number of different attempts both to analyze and to cope with the successes of the sciences their broad penetration into social life and the sense of problem and crisis that they have projected Among the of movements concerned about the earlier responses were the development social responsibility of scientists and

technological practitioners There is little doubt that this was a direct outgrowth of the role of science in the war epitomized by the successful construction and catastrophic use of the atomic bomb The recognition of the deep social utility of science and especially its role as an instrument of war fostered curiosity about the earlier development of scientific disciplines and institutional forms The history of science as an explicit discipline with full time practitioners can be seen as an attempt to locate science in temporal space first in its intellectual form and secondly in its institutional or social form The sociology of science while certainly having roots in the pre war work of Robert K **Japanese Society Since 1945** Edward R.
