Anti Inflammatory Drugs From Plant And Marine Sources:

Anti-Inflammatory Drugs from Plant and Marine Sources David A. Lewis, 1989-03-01 *Anti-inflammatory Drugs from Plant and Marine Sources* David A. Lewis, 1989 *Essentials of Marine Biotechnology* Se-Kwon Kim, 2019-08-31 This textbook introduces marine biotechnology by collecting the key knowledge on genetics fish breeding genetic diversity seaweed production and microalgae biotechnology and explores marine biomaterials and how they can benefit human health Covering the latest applications of marine biotechnology in natural product development genomics transgenic technology cosmeceuticals nutraceuticals and pharmaceutical development it particularly focuses on future biological resources developing functional materials from marine life production of marine bioenergy and marine microbial resources and biotechnology The author explains the structure of the book in an introductory note and each chapter offers a detailed overview and conclusion to help readers better grasp the acquired knowledge Lastly the final part provides a comprehensive glossary with brief explanations of the key concepts in marine biotechnology Written by a leading expert in the field with more than 30 years of teaching experience this book broadens students understanding of the basics and recent developments in marine biotechnology *Health Benefits of Secondary Phytocompounds from Plant and Marine Sources* Hafiz Ansar Rasul Suleria, Megh Goyal, 2021-01-21 This new volume *Health Benefits of Secondary Phytocompounds from Plant and Marine Sources* looks at a selection of important issues and research topics on phytochemicals in plant based therapeutics covering bioactive compounds from both plant and marine sources Natural products and their bioactive compounds are increasingly utilized in preventive and therapeutic medication as pharmaceutical supplements as well as in functional foods and nutraceuticals all of which have potentially positive effects on health and have preventive and curative properties for various diseases and health conditions The first section of the book on Bioactive Compounds from Plant Sources describes the concept of extraction of bioactive molecules from plant sources both conventional and modern extraction techniques available sources biochemistry structural composition and potential biological activities Advanced extraction techniques such as enzyme assisted microwave assisted ultrasound assisted pressurized liquid extraction and super critical extraction techniques are described in detail *Marine Anti-inflammatory Agents* Javier Avila-Román, Elena Talero, 2019-10-25 Acute inflammation is a highly regulated process and its dysregulation can lead to the development of a chronic inflammatory state which is believed to play a main role in the pathogenesis of many diseases including cancer In recent years the need to find new anti inflammatory molecules has raised the scientific community's interest for marine natural products In this regard the marine environment represents a source for isolating a wealth of bioactive compounds In this Special Issue the reported products have been obtained from microalgae sea cucumber octopus squid red alga derived fungus cnidarians hard shelled mussel and sponges This Special Issue of *Marine Drugs* covers both the in vitro and in vivo studies of marine agents with anti inflammatory activities in addition to clinical trials conducted in humans Among the bioactive molecules reported in the

papers are lipid compounds such as glycolipids which for the first time demonstrated their preventive effects in an inflammatory model of skin hyperplasia. In addition, beneficial effects of the carotenoid fucoxanthin were shown in the same model of skin hyperplasia in UVB induced damage and in a model of inflammatory pain. Moreover, frondanol, a lipid extract from *Cucumaria frondosa*, attenuated inflammation in an acute colitis model. Another paper evaluated the fatty acid compositions of lipid extracts from some common seafood organisms reporting the highest level of omega 3 polyunsaturated fatty acids and the highest anti-inflammatory activity in the extracts from octopus and squid byproducts. Additionally, the anti-inflammatory effects of other marine compounds have been reported including hirsutanol A, a sesquiterpene from the red alga derived marine fungus *Chondrostereum* sp. NTOU4196, two zoanthamine alkaloids from the zoantharian *Zoanthus cf. pulchellus*, an D-glucan from the hard-shelled mussel *Mytilus coruscus*, and the polyphenol pyrogallol, phloroglucinol, 6,6-bieckol from an edible marine brown alga. Finally, this Special Issue is supplemented by three reviews focused on the occurrence of prostaglandins in the marine environment and their anti-inflammatory role, fish lipid emulsions used to improve patient outcomes in an inflammatory environment such as postoperative, and the chemically induced production of compounds with anti-inflammatory activity from microalgae.

Plants as Sources for Novel Medicines Ameyatma Mahajan, 2025-01-03. *Plants as Sources for Novel Medicines* delves into the vital role plants play in providing essential resources for human well-being. Their unique metabolisms produce compounds beneficial to human health, making them indispensable in drug development. Many traditional methods of drug preparation use plant-derived compounds for their remarkable healing properties. Our book explores the various techniques used to produce drugs from plants, highlighting the advancements in recent methods while emphasizing the need to protect endangered plant species. We cover the different stages of drug preparation, discussing the properties of plants and their application in modern medicine. We also touch on the importance of botany and related fields in drug development, illustrating how sophisticated methods in plant-based drug preparation are transforming healthcare. This book is an invaluable resource for understanding how plants contribute to developing novel medicines and improving human health.
