Policies: Fighting Resistance Ian M. Gould,Jos W.M. van der Meer,2007-08-19 In 1971 I started a fellowship in infectious diseases and medical microbiology at the Channing Laboratory of the Harvard Medical Service at Boston City Hospital My mentor Dr Maxwell Finland had encouraged me to return there from the Center for Disease Control as CDC was known then where I had studied infectious diseases epidemiology and hospital associated infection epidemiology with the idea that we would review the demographic patterns of bacteremia and several other infections during Dr Finland's long tenure at the hospital We did so but I was surprised to find that he also invited me to help with the assessment of the success or failure of the programs to control antimicrobial use that he and colleagues had put into place at the hospital over several years The paper describing that review finally was published in 1974 after a long and tortuous process of review at several journals Several reviewers felt that such attempts to improve use amounted to interference with the patient's physician to do what was best Others felt that such programs focused incorrectly on a subject other than treating the current patient Fortunately today it is clear that antimicrobial resistance results in major part but not entirely from the ways that we use antimicrobial agents and that the overall interests of patients in general as well as those of society are well served by efforts to use these drugs as well as possible Antibiotics - Therapeutic Spectrum and Limitations Amal Kumar Dhara,Amit Kumar
