

ANTIDIURETIC HORMONE¹

◆1333

Joseph S. Handler and Jack Orloff

Laboratory of Kidney & Electrolyte Metabolism, National Heart, Lung, and Blood Institute, National Institutes of Health, Bethesda, Maryland 20205

This short review summarizes selected recent developments in our understanding of the mechanism of action of antidiuretic hormone (ADH). The subject has been reviewed in greater detail elsewhere (4, 22, 24-26, 30, 56).² After briefly considering the effects of ADH along the nephron, this review focuses on the control and the cellular mechanism of those effects that result in antidiuresis.

SITES OF THE EFFECTS ON TRANSPORT AND PERMEABILITY

In the limited range of mammalian species studied, ADH directly affects the glomerulus, medullary and cortical thick ascending limb, the connecting tubule, cortical and medullary collecting ducts, and papillary lining cells.

In the physiological concentration range ADH does not alter glomerular filtration rate (GFR) in mammals. Ichikawa & Brenner (27) found, however, that the glomerular ultrafiltration coefficient (K_f) fell as rats went from a state of water diuresis to a state of hydropenia. When a variety of manipulations were used to alter plasma ADH over a broad range, the inverse relationship between presumed plasma ADH concentration and K_f still held. Though one would expect the fall in K_f to result in a fall in GFR, virtually no change in either whole-kidney or single-nephron GFR was observed. The decrease in GFR was prevented by a concomitant rise in

¹The US Government has the right to retain a nonexclusive, royalty-free license in and to any copyright covering this paper.

²The terminology is that used by Andreoli & Schafer (4). ADH connotes all species of antidiuretic hormone unless a specific analog is mentioned. P_f is the coefficient of hydraulic conductivity ($\text{cm} \cdot \text{sec}^{-1}$) evaluated by measuring water flow along an osmotic gradient. PD_w is the coefficient of diffusional permeability to water ($\text{cm} \cdot \text{sec}^{-1}$) evaluated by measuring the rate of exchange of isotopic water across a membrane. PD_i is the apparent diffusional permeability coefficient for the i th solute.

Antidiuretic Hormone Volume 4 Annual Research Reviews

R Sandford

Antidiuretic Hormone Volume 4 Annual Research Reviews:

List of Annual Reviews of Progress in Science and Technology ,1981 **Amino Acids, Peptides and Proteins** R. C. Sheppard,1981 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume
