Anticancer Agents Based On Natural Product Models:

Bioactive Natural Products Detection, Isolation, and Structural Determination Steven M. Colegate, Russell J. Molyneux, 1993-09-29 Bioactive Natural Products covers all the aspects of bioactive natural product research from ethnobotanical investigations to modern technologically assisted isolation and structural determination of active compounds. An internationally selected group of experts share their knowledge of a wide range of bioactivities and chemical compound classes. Topics in the chapters describing the modern application of detection, isolation, and structural determination techniques are strongly supported by chapters detailing and reviewing research involving various classes of bioactivity. Research areas include the immunomodulatory, antiviral, cytotoxic, anti-inflammatory, and insect behavior classes of bioactivity. Extensive referencing throughout the text is helpful to those readers not familiar with this subject and serves as a critical review for more experienced researchers. The book is also excellent for upper division or post graduate courses.

Anticancer Agents from Natural Products Gordon M. Cragg, David G. I. Kingston, David J. Newman, 2005-06-13 Plants, marine organisms, and microorganisms have evolved complex chemical defense and signaling systems that are designed to protect them from predators and provide other biological benefits. These organisms thus produce substances containing novel chemotypes that may have beneficial effects for humans. As collection methods improve and new screening Anticancer Plants: Natural Products and Biotechnological Implements Mohd Sayeed Akhtar, Mallappa Kumara Swamy, 2018-07-02 This volume provides summarized scientific evidence of the different classes of plant-derived phytochemicals, their sources, chemical structures, anticancer properties, mechanisms of action, methods of extraction, and their applications in cancer therapy. It also discusses endophyte-derived compounds as chemopreventives to treat various cancer types. In addition, it provides detailed information on the enhanced production of therapeutically valuable anticancer metabolites using biotechnological interventions such as plant cell and tissue culture approaches including in vitro hairy root and cell suspension culture and metabolic engineering of biosynthetic pathways. Anticancer Plants: Natural Products and Biotechnological Implements Volume 2 explores the natural bioactive compounds isolated from plants as well as fungal endophytes, their chemistry, and preventive effects to reduce the risk of cancer. Moreover, it highlights the genomics, proteomics approaches, and biotechnological implementations. Providing solutions to deal with the challenges involved in cancer therapy, the book benefits a wide range of readers including academics, students, and industrial experts working in the area of natural products, medicinal plant chemistry, pharmacology, and biotechnology. **Handbook of Research on Natural Products and Their Bioactive Compounds as Cancer Therapeutics** Pandurangan, Ashok Kumar, Anandasadagopan, Suresh Kumar, Alhumaydhi, Fahad A., 2022-03-18 Many chemotherapeutic agents are available in today's market that are highly effective against a variety of cancer types; however, the major drawbacks of these chemotherapeutic agents are the many side effects. As an alternative to these chemotherapeutic agents, there are a number of

natural agents that are effective against cancer that have been tested in preclinical and clinical models over the years These natural products must be documented and discussed in order to provide a thorough overview of all the options available for cancer treatment The Handbook of Research on Natural Products and Their Bioactive Compounds as Cancer Therapeutics emphasizes the list of natural agents against all types of cancers and discusses the current state of research in the fields of natural products and their derivatives against cancer in preclinical and clinical models This book also provides insight into the applications of meditation and mindfulness based interventions in clinical and non clinical conditions Covering topics such as cancer therapy antioxidants and flavonoids it is ideal for students research scholars academicians professors scientists oncologists doctors and medical practitioners

Natural Products Chemistry III T.I. Atta-ur-Rahman, Philip W. Le Quesne, 2012-12-06

Natural product chemistry has undergone an explosive growth during the latter half of the current century This has been brought about by a number of factors One of these has been the growing number of substances from natural sources which display interesting pharmacological activities These include antibiotics anti tumor agents immunostimulants drugs affecting the cardiovascular and central nervous systems analgesics etc Another factor has been the improvements made in the technology of isolation processes which includes the development of such techniques as high pressure liquid chromatography which has allowed the rapid isolation of substances which were previously difficult to obtain by classical procedures The most important factor has been the development of new spectroscopic techniques which have opened up whole new vistas in this exciting field Prominent in these advances has been the advent of powerful superconducting magnets with very stable magnetic fields and pulse NMR in which the duration direction and phases of pulses can be accurately controlled by means of mini computers These have heralded the advent of two dimensional NMR spectroscopy which has now come to be routinely employed in unravelling complex structures No less important though somewhat less dramatic have been the advances made in the field of mass spectroscopy where new ionization techniques such as positive and negative fast atom bombardment field desorption chemical ionization etc have allowed the mass spectra of larger non volatile substances to be recorded The field of organic synthesis has seen equally rapid advances
