Anticipated And Abnormal Plant Transients In Light Water Reactors:

Anticipated and Abnormal Plant Transients in Light Water Reactors Pamela Lassahn, 2013-11-11 Over the last 30 years reactor safety technology has evolved not so much from a need to recover from accidents or incidents but primarily from many groups in the nuclear community asking hypothetical searching what if questions This questioning has indeed paid off in establishing preventive measures for many types of events and potential accidents Conditions such as reactivity excursions large break loss of coolant core melt and containment integrity loss to name a few were all at one time topics of protracted discussions on hypothesized events Historically many of these have become multiyear large scale research programs aimed at resolving the what ifs For the topic of anticipated and abnormal plant transients however the searching questions and the research were not so prolific until the mid 1970s At that time probabilistic risk methodologies began to tell us we should change our emphasis in reactor safety research and development and focus more on small pipe breaks and plant transients Three Mile Island punctuated that message in 1979 The plant transient topic area is a multidisciplinary subject involving not only the nuclear fluid flow and heat transfer technologies but also the synergistics of these with the reactor control systems the safety systems operator actions maintenance and even management and the economic considerations of a given plant

Light Water Reactor Safety Analysis brings together government and expert researchers entrusted with maintaining the safety of reactors preventing incidents and for creating the guidelines for responding appropriately to emergency situations It includes an overview presented by the U S Nuclear Regulatory Commission One of the most relevant compendiums of its time it is a volume of both historical and scientific significance and well worth the consideration of those currently involved with maintaining reactor safety **ERDA Energy Research Abstracts**, 1983 **Nuclear Safety**, 1978 Publications of Los Alamos Research Los Alamos National Laboratory, 1985 Cognitive Reliability and Error Analysis Method (CREAM) E. Hollnagel, 1998-01-23 The growing dependence of working environments on complex technology has created many challenges and lead to a large number of accidents Although the quality of organization and management within the work environment plays an important role in these accidents the significance of individual human action as a direct cause and as a mitigating factor is undeniable This has created a need for new integrated approaches to accident analysis and risk assessment This book detailing the use of CREAM is therefore both timely and useful It presents an error taxonomy which integrates individual technological and organizational factors based on cognitive engineering principles In addition to the necessary theoretical foundation it provides a step by step description of how the taxonomy can be applied to analyse as well

as predict performance using a context dependent cognitive model CREAM can be used as a second generation human reliability analysis HRA approach in probabilistic safety assessment PSA as a stand alone method for accident analysis and as part of a larger design method for interactive systems In particular the use of CREAM will enable system designers and risk analysts to identify tasks that require human cognition and therefore depend on cognitive reliability determine the conditions where cognitive reliability and ensuing risk may be reduced provide an appraisal of the consequences of human performance on system safety which can be used in PSA

The Complexity of Proceduralized Tasks Jinkyun Park, 2009-09-17 We think we have scientific knowledge when we know the cause Aristotle Posterior Analytics Book II Part 11 About 12 years ago when I was a graduate student many people were concerned about my Ph D topic investigating the effect of the complexity of proceduralized tasks on the performance of human operators working in nuclear power plants Although they agreed with the fact that procedures especially emergency operating procedures play a crucial role in securing the safety of nuclear power plants it was amazing that most of them pointed out a very similar issue I cannot understand why operating personnel see any difficulty or complexity in conducting procedures because all that they have to do is to follow a simple IF THEN ELSE rule as written Actually this issue is closely related to one of the main questions I was recently asked such as Don't you think your work is too academic to apply to actual procedures or I guess we don't need to consider the complexity of procedures because we can develop a good procedure using many practical procedure writers guidelines Then what is the real contribution of your work I absolutely agree with the latter comment Yes we can develop a good procedure with the support of many practical and excellent guidelines **High**

Converting Water Reactors Yigal Ronen, 1989-12-21 The purpose of this book is to describe concepts related to advanced water reactors with particular focus on Advanced Pressurized Water Reactors It discusses the severe disadvantages which water reactors have with respect to uranium utilization It also reveals new concepts in which the conversion ratio and the uranium utilization is improved This interesting work includes information on various other ways used in addition to the increase in the conversion ratio This is an informative useful book for all nuclear scientists and engineers and anyone who is interested in high converting water reactors **Dynamics and Control in Nuclear Power Stations** British Nuclear Energy Society, 1992 This volume covers a wider view of the aspects of control of nuclear power stations by taking into consideration the plant as a whole and the protection systems employed therein Authors with world wide experience consider

all the aspects of dynamics and control in the context of both fast and thermal power stations The topics discussed include both the methods of development and applications within analysis of plant behaviour validation of mathematical models plant testing design and implementation of controls
