Mak,2012-12-06 The importance of thymus dependent cells or T cells in the generation of a successful immune response was first realized in the early sixties In the following two decades a succession of elegant experiments established the antigen specificity of T cells and their ability to perform both as regulatory and effector cells T cells were shown to be essential in most immune reactions playing a crucial role in augmenting the activity of effector T and B cells against foreign antigen as well as in the suppression of effector activity against self antigens The means by which T cells differentiate foreign from self antigens is based on their recognition of antigen almost exclusively in the context of self major histocompatibility complex products unlike B cells which recognize an antigen alone It is this recognition mediated by the T cell receptor that sets into motion the diverse cell cell interactions which control the differentiation and regulation of the immune response Although its importance was well established the molecular nature of the T cell receptor remained elusive for two decades Many hypotheses as to its structure and precise function were put forward using immunoglobulin as a basis for conjecture but the Holy Grail of Immunology remained ephemeral until three years ago In the ensuing years both immunologists and molecular biologists have contributed to an explosion of data unsurpassed by any previous period in the field **Medical Subject Headings** National Library of Medicine (U.S.),1999 **B Cell Receptor Signaling** Tomohiro Kurosaki,Jürgen Wienands,2015-12-26 This volume details our current understanding of the architecture and signaling capabilities of the B cell antigen receptor BCR in health and disease The first chapters review new insights into the assembly of BCR components and their organization on the cell surface Subsequent contributions focus on the molecular interactions that connect the BCR with major intracellular signaling pathways such as Ca²⁺ mobilization membrane phospholipid metabolism nuclear translocation of NF- κ B or the activation of Bruton's Tyrosine Kinase and MAP kinases These elements orchestrate cytoplasmic and nuclear responses as well as cytoskeleton dynamics for antigen internalization Furthermore a key mechanism of how B cells remember their cognate antigen is discussed in detail Altogether the discoveries presented provide a better understanding of B cell biology and help to explain some B cell mediated pathogenicities like autoimmune phenomena or the formation of B cell tumors while also paving the way for eventually combating these diseases *Index Medicus* ,2004 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings Cumulated Index Medicus ,1984 Biomedical Index to PHS-supported Research ,1991 **Biomedical**
