Antimutagenesis and Anticarcinogenesis Mechanisms III Giorgio Bronzetti, Hikoya Hayatsu, Silvio De Flora, Michael D. Waters, Delbert M. Shankel, 2012-12-06 Lifestyle in any part of the world is associated with the occurrence of major chronic diseases including coronary heart disease hypertension and stroke many distinct types of cancer and adult onset diabetes 11 22 70 75 One important element of lifestyle is tobacco use which appreciably increases the risk of a number of chronic diseases 21 Other lifestyle factors relate to nutritional traditions alcohol use and exercise 11 30 58 60 70 71 The underlying evidence is in part based on the evidence of specific diseases in relation to dietary habits in a given geographic region as well as changes in such disease occurrences in migrant populations from a low risk to a high risk area and vice versa 25 42 Populations that customarily consume fruits and vegetables and also whole grain cereal products generally have a lower risk of cardiovascular diseases and specific types of cancer than populations with a lower intake of such foods everything else being equal 63 In the last few years research has provided mechanistic explanations as to the reasons for the protective effects of specific foods This paper will emphasize the mechanisms whereby cancer risks are reduced by dietary modification

Antimutagenesis and Anticarcinogenesis Mechanisms II Yukioki Kuroda, Delbert M. Shankel, Michael D. Witmer, 2013-11-21 Much of organic chemistry is based on the ability of suitably structured chemicals to bind together through the formation of covalent bonds Biochemistry is replete with examples of enzymatically catalyzed reactions in which normal body constituents can be linked through covalent bonds during the process of intermediary metabolism The finding that xenobiotic chemicals that enter the body from the environment are metabolized to highly reactive species and then covalently react with cellular macromolecules to induce toxic and carcinogenic effects was an observation that spawned the research featured in the Fifth International Symposium on Biological Reactive Intermediates BRI V The group of investigators that became fascinated with this process and its significance in terms of human health began their discussions in Turku Finland J 975 and continued them at Guildford England 1980 College Park Maryland 1985 Tucson Arizona 1990 and Munich Germany 1995 Among the results were a series of reports listed below as well as the book for which this serves as the Preface Jollow DJ Kocsis JJ Snyder R and Vainio H eds Biological Reactive Intermediates Formation Toxicity and Inactivation Plenum Press NY 1975 Snyder R Park D V Kocsis JJ Jollow D V Gibson G G and Witmer C M eds Biological Reactive Intermediates II Chemical Mechanisms and Biological Effects Plenum Press N Y 1982 National Library of
