## **Antioxidants In Therapy And Preventive Medicine:**

*Antioxidants in Therapy and Preventive Medicine* Ingrid Emerit, Lester Packer, Christian Auclair, 2012-12-06 Twenty years ago the enzyme superoxide dismutase which uses the superoxide radical anion as its specific substrate was reported. With this discovery was born a new scientific field in which oxygen necessary for aerobic life on this planet had to be considered also in terms of its toxicity and stresses. This stimulated the search for knowledge of active oxygen species in biology and medicine. Superoxide and other reactive oxygen species are now implicated in many disease processes. Major advances have been achieved during these past years with respect to free radical generation and mechanisms of free radical action in causing tissue injury. In parallel the possibility of influencing free radical related disease processes by antioxidant treatment was studied in various in vitro and in vivo systems. This was the unique theme of a conference organized in Paris by the Society for Free Radical Research December 9-10 1988 which brought together experts from basic sciences and clinicians in order to evaluate the current status of antioxidant therapy. The conference emphasized fundamental processes in antioxidant action. Among the major topics were superoxide dismutase SOD and low molecular weight substances with such activity called SOD mimics. Other antioxidant enzymes were also considered. Antioxidant vitamins in particular vitamins E and C other naturally occurring antioxidants and various synthetic antioxidants were included in the presentations as there is now a rapidly developing series of compounds with potentially interesting clinical applications.

*Analysis of Free Radicals in Biological Systems* A. Favier, J. Cadet, B. Kalyanaraman, M. Fontecave, J.L. Pierre, 2012-12-06 Oxidative stress is used as the generic term describing the involvement of reactive oxygen species in various human diseases. The scope of such a topic is becoming increasingly wide. The recent interest in radicals such as nitric oxide and the discovery of new mechanisms such as the effect of free radicals on redox sensitive proteins and genes are enlarging our understanding of the physiological role of free radicals. Oxidative stress is involved in numerous pathological processes such as ageing, respiratory or cardiovascular diseases, cancer, neurological pathologies such as dementia or Parkinson's disease. It still remains difficult however to demonstrate by chemical measurement the in vivo production of free radicals and even more to realise their speciation. Therefore the development of new tools and indicators is engrossing many researchers working in this field. Reliable indicators are also lately necessary not only to monitor the evolution of oxidative stress in patients but also to evaluate the efficiency of new antioxidant treatments. The French Free radical club of Grenoble the CERLIB has been involved for many years in the organisation of international training programs on methodology in order to provide both theoretical and practical help to researchers from various countries. Such training sessions have been highly successful and participants value the opportunity to learn reliable techniques. This positive echo explains why the researchers of CERLIB decided with the help of Prof Dr B Kalyanaraman to publish selected techniques on free radical research.
