Novel Therapeutics from Modern Biotechnology Dale L. Oxender, Leonard E. Post, 2013-06-29 A cover story of Business Week Magazine in January 1984 stated Biotech Comes of Age In February 1986 Venture Magazine had a cover article entitled The Biotech Revolution is Here This article went on to say New Genetic Technologies Will Transform Our Lives These announcements were made many years after the first biotechnology companies such as Genentech Cetus Amgen and Biogen were formed to commercialize the New Biology At the time of writing this book there are over 1300 biotech companies developing new technologies or identifying potential biotech drugs Most of these

companies were started in the height of the high technology hype although companies are still forming as the technology advances A more recent survey showed only a relatively small number of Food and Drug Administration FDA approvals among over several hundred biotechnology products now in clinical trial One could ask why it has taken so long to produce biotechnology products Part of the reason is that each new class of biotech products brings with it a set of problems that need to be solved before they enter clinical trials These problems are often unique to biotechnology products such as peptides proteins monoclonal antibodies nucleic acids and cellular therapies

Oligonucleotides as Therapeutic Agents Derek J. Chadwick, Gail Cardew, 2008-04-30 The use of oligonucleotides as therapeutic agents rests upon their ability to interfere in a sequence specific manner with the fundamental machinery of protein synthesis either by binding to the mRNAs transcribed from a gene or by binding directly to a target gene This approach can be used not only for inhibition of the synthesis of host proteins but also of those required by invading pathogens Potential therapeutic applications are enormous ranging over hypertension cardiovascular disease autoimmune disease viral and other parasitic infections especially HIV and cancer This book discusses the chemistry and pharmacokinetics of oligonucleotides and their analogues and surveys the results of structure activity studies and current clinical trials It also critically reviews the problems with antisense therapy such as the enzymatic destruction of oligonucleotides the doses required for a therapeutic response the difficulty in directing oligonucleotides to particular target tissues and cells the need for parenteral administration and doubts concerning the mechanism of action especially problems associated with non specific binding to proteins and long term effects

Molecular and Cellular Genetics Edward Bittar,1996-09-24 The tools of molecular biology have revolutionised our understanding of gene structure and function and changed the teaching of genetics in a fundamental way The transition from classical genetics to molecular genetics was initiated by two discoveries One was the discovery that DNA has a complementary double helix structure and the other that a universal genetic code does exist Both led to the acceptance of the central dogma that RNA molecules are made on DNA templates The last twenty years have seen remarkable growth in our knowledge of molecular genetics most of which is the outcome of recombinant DNA technology This technology which is not limited to cloning sequencing and expression has created a biotechnology industry of its own the purpose of which is to develop new diagnostic and therapeutic approaches in medicine Both industries in collaboration with the biomedical community are now engaged in laying down the foundation of molecular medicine The present volume seeks to provide a coherent account of the new science of molecular genetics Its content however is by no means exhaustive partly because of the publication explosion but more because of space restrictions A rudimentary knowledge of genetics on the reader's part is assumed Quite understandably considerable emphasis is placed on major technical advances but not without expounding numerous new ideas and phenomena including alternative splicing DNA methylation genomic imprinting and so on

Novel Anticancer Drug Protocols John K. Buolamwini,Alex A. Adjei,2008-02-01 We are in an exciting era in the war against cancer with real prospects for novel anticancer drugs that are cancer cell specific without the toxicities that have been the hallmark of conventional cytotoxic cancer chemotherapy Advances in cancer cell biology fueled by the molecular biology revolution have resulted in the uncovering of many novel potential molecular targets for cancer therapy New anticancer drug discovery and development is now largely focused on exploiting these new molecular targets which encompass oncogenes tumor suppressor genes and their gene products as well as targets involved in tumor angiogenesis metastasis survival and longevity mechanisms Exploitation of some of these targets has already yielded fruits and introduced new paradigms of molecularly targeted cancer therapy into the clinic namely protein kinase inhibition by antibodies or small molecules exemplified by Herceptin trastuzumab a humanized antibody targeted against the HER 2 growth factor receptor tyrosine kinase for the treatment of metastatic breast cancer and Gleevec a small molecule bcr abl kinase inhibitor for the treatment of chronic myelogenous leukemia
