Bovine Spongiform Encephalopathy Clarence F. Gibbs, Jr., 2012-12-06 The very first international working discussion on slow infections of the nervous system was entitled Slow Latent and Temperate Virus Infections and was held at the National Institutes of Health NIH in December 1964 The primary impetus was the discovery and investigation of kuru in New Guinea by D Carleton Gajdusek M D This working discussion brought together investigators in human and veterinary medicine virologists microbiologists and neuropathologists actively engaged in laboratory work with viruses that illustrated properties of latency masking slowness or temperateness with emphasis on subacute and chronic neurologic diseases of unknown etiology In the Preface to the monograph of published papers presented at the working discussion Gajdusek and Gibbs wrote the

following After microbiology had given solution to the etiology of most acute infections of the central nervous system and after fungi and bacteria had been incriminated in important chronic disorders of the nervous system such as torula and tuberculosis meningitis we have been left in neurology with a wide range of subacute and chronic affections of the central nervous systems of unknown etiology Some of these diseases still listed as idiopathic are among the most prevalent afflictions of the central nervous system Many others with familial patterns of occurrence do not yet have their basic pathogenesis or underlying metabolic defect elucidated although we tend to think of them as genetically mediated

Progress in Drug Research JUCKER,2013-03-07 In the first years of the existence of this series of monographs during the so called Golden Age of drug research the majority of the papers published were mainly concerned with the traditional domains of drug research namely chemistry pharmacology toxicology and pre clinical investigations The series aim was to give coverage to important areas of research to introduce new active substances with therapeutic potential and to call attention to unsolved problems This objective has not changed The table of contents of the present volume makes evident however that the search for new medicines has become increasingly complex and additional new disciplines have entered the research arena The series now includes reviews on biochemical biological immunological physiological and medicinal aspects of drug research Researchers actively engaged in the various scientific fields forming the entity of drug research can benefit from the wealth of knowledge and experience of the respective authors and will be assisted in their endeavour to discover new pharmaceutical agents Those simply wanting to keep abreast of new developments in the complex multi discipline science can turn to the Progress in Drug Research volumes as an almost encyclopaedic source of information without having to consult the innumerable original publications Volume 33 contains 13 reviews a subject index an index for the close to 400 articles published in the series so far and an author and titles index for all 33 volumes

Herpes Simplex Virus Barry T. Rouse,2012-12-06 Although upstaged by the tragic appearance of the human immunodeficiency virus herpes simplex viruses HSV types 1 and 2 continue to be major human pathogens against which we lack acceptable vaccines or other means of immunological control The virus is large and complex coding for 70 or more proteins Although many mysteries remain to be unraveled our knowledge base regarding genomic organization gene expression and regulation pathogenesis and immune recognition of component parts is quite considerable Indeed meetings devoted entirely to herpesviruses are conspicuous by their frequency and excellent yet sometimes exclusive attendance The purpose of this volume is to compile in a single book a series of reviews by leading investigators that deal with various aspects of virus host interactions and which hopefully will provide clues as to how to best manage HSV from an immunobiological perspective Ultimately one anticipates that a full understanding of virus host interaction will lead to strategies useful for the prevention and control of HSV The state of current progress with conventional vaccines is presented as is a chapter on intracellular immunization This latter novel approach to virus infections comes at approximately the bicentenary of Jenner's introduction of a successful conventional immunization strategy
