Wolfgang Wildgen

Antoni Gaudi 1852-1926:

Antoni Gaudí, 1852-1926 Maria Antonietta Crippa, 2003 Gaudí's bizarre and romantic buildings interiors and exteriors
mosaics and public spaces have imbued Barcelona with unique character and ensured his place in the pantheon of great
architects **Antoni Gaudí, 1852-1926** Juan José Lahuerta, 2003 Antoni Gaudí 1852-1928 was a builder by instinct and by

practice fanciful and baroque in his sensibility in love with the bright colours and plastic forms of the Mediterranean
tradition Despite his considerable contributions Gaudí was an isolated figure in the architecture of the modern era Critics
were slow to recognize the prophetic value of his work owing to the difficulty in reconciling it with the development of the
Modern Movement Gaudí invented a new form of modernism that combined elements of art nouveau Catalan nationalism
Gothic Revival and his own relentlessly original imagination His eclectic experience was made possible by special historical
circumstances such as the economic prosperity of Barcelona and the existence of highly skilled craftsmen in Catalonia This
volume covers Gaudí's work in systematic fashion from the Güell Palace to the park of the same name and finally to his
unfinished masterpiece the church of the Sagrada Família Author Juan José Lahuerta devotes an attentive critical re
examination of the architect's work through a thorough analysis of his designs and writings **Antoni Gaudí, 1852-1926**

Architectural Design Strategies for Saving Energy in Buildings Ana-Maria Dabija, 2024-11-12 Architectural Design Strategies for Saving Energy in Buildings An Architect s View employs an architect s perspective defined equally as art and engineering science to the contemporary concept of designing buildings that use less energy This approach to lowering energy consumption via integrated measures both passive and active offers a nuanced perspective on managing building efficiency that energy saving is not a target in itself but results as a consequence of the architectural concept The book does not provide calculations or levels of performance Rather by sticking to qualitative principles of architectural design and analyzing and using the force and laws of nature in shaping the built space the author argues for decreasing energy consumption through the process of design the principles of building physics the volume of the building itself and spatial configuration as it relates to the costs of operating the building This approach contrasts the traditional construction system of only providing a thermal insulated blanket over the envelope and equipment that produces energy from unconventional sources which can be calculated according to regulations Amidst the current discourse on sustainability and energy efficiency this book offers a thought provoking read for professionals in architecture civil engineering and construction as well as graduate students in related courses It presents an architect s approach to nearly zero emission building design analyses architectural strategies that efficiently use energy in buildings and examines famous
