Asias Clean Revolution Industry Growth And The Environment:

Asia's Clean Revolution David Angel, Michal Rock, 2017-09-20 The world's environmental future will be determined in significant part by what happens in the rapidly industrialising and urban economies of Asia. The sheer scale of urban population and industrial growth in Asia from Indonesia to China and the energy and materials intensive character of the development process constitutes a dark shadow over the region's and indeed the world's environment. And yet this challenge is also an opportunity. Precisely because so much of the urban industrial investment within developing Asia has yet to take place, the opportunity exists to shape a different development future, one that is far less energy, materials and waste intensive. *Asia's Clean Revolution* examines the prospects for and pathways to such a new trajectory. The book lays out a path-breaking vision of how developing economies might go beyond environmental regulation and put in place an array of policies and institutions that could integrate environmental, industrial and technological goals. These findings provide important input for negotiators considering climate change on a global scale. The book approaches the challenge of growth and environment in Asia in a novel way by identifying six major transformational dynamics under way in the world today and assessing whether these can be harnessed to the goal of improved environmental performance of industry. With a set of specially commissioned chapters from the leading authorities in North America and Asia, this ground-breaking book is the first to present concrete policy solutions to the looming crisis driven by large-scale urban industrial growth in developing Asia. *Asia's Clean Revolution* David Angel, 2017 The world's environmental future will be determined in significant part by what happens in the rapidly industrialising and urban economies of Asia. critically examines the interface between sustainability development and the governance of international investment It challenges the conventional view that foreign direct investment is a miracle drug for developing countries and exposes serious shortcomings in the current international investment regime Composed of norms agreements treaties and regulations the emerging investment regime expands the rights of transnational corporations TNCs without commensurate rewards for the common good Drawing on both research and engaged advocacy the contributors ultimately map out a new way forward towards the creation and implementation of international investment rules that will promote global sustainability and equity

Pollution Control in East Asia Michael T. Rock, 2010-09-30 Why do some economies seem to excel at effective pollution management while others miss the mark when responding to deteriorating urban environments These studies of pollution management in East Asia s newly industrialized economies NIEs include successful government responses in Singapore and Taiwan qualified results in China and Indonesia and much more limited success in Thailand and Malaysia In each example Michael Rock considers the starting point of the economy as it began its path toward industrialization in the post World War II period He discusses the relevant historical and political context the pressures placed on the political system from domestic and international sources and the influence of ongoing trends in East Asia for democratization and economic liberalization Rock s text makes it clear that each economy found unique innovative ways to link environmental protection to its own political and economic institutions Thus while public pressure from both home and abroad gave strong impetus to successful programs in Taiwan the development of policy in Singapore involved limited public review and a centralized government led process The result of Rock s scholarship is a book that provides important lessons without being reductionist The book offers insights to apply to pollution management in a diverse range of developing nations but avoids attempts for precise prescriptions or universally appealing normative answers A copublication of Resources for the Future and the Institute of Southeast Asian Studies ISEAS

International Environmental Laws Controlling Transboundary Atmospheric Pollution in Southeast Asia - Rajawali Pers Dr. Sukanda Husin, S.H., LL.M., 2023-07-07 The issue of global warming and global climate change as mainly caused by transboundary air pollutants has emerged since the middle of the 1970 s To some extent the impacts of global warming and global climate change are still considered uncertain by a great many nations However several environmental catastrophes have been proved highly related to the release of certain noxious emissions creating global warming and global climate change Global warming is presently one of the most threatening environmental issues facing the world Although the uncertainty of the issue is still high the United Nations Organization based on precautionary principle concluded the 1985 Vienna Convention for the Protection of the Ozone Layer hereinafter cited as the Ozone Convention the 1987 Montreal Protocol on Substances that Deplete the Ozone Layer and the United Nations Framework Convention on Climate Change in 1992 ASEAN has not done much to implement the Ozone Convention and the Climate Change Convention in the region ASEAN tended to pass soft laws rather than hard laws to deal with transboundary

atmospheric pollution especially resulting from land and forest fires The book is therefore necessary to examine a specific regional environmental policies and laws dealing with global warming and climate change in Southeast Asia ASEAN the Association of Southeast Asian Nations as a fairly big regional cooperation with a great many environmental problems is chosen as examples on how a region implements international treaties coping with the issues of global warming and climate change and on what prospects a region might have in tackling the issues Sustainability And Cities: Concept And Assessment Giok Ling Ooi,2005-08-15 This important book addresses issues of development and its environmental sustainability for the fastest growing areas in Asia its cities Recognizing sustainability with respect to the environment and its exploitation has yet to make its impact on development plans in Asia The problem is due to the lack of cross country studies which provide a fair understanding of the different levels of development as well as the wide variety of development strategies adopted by different countries The relatively ineffective implementation of environmental assessment has not done much to reduce the damage to or depletion of the natural resource base Sustainability and Cities Concept and Assessment aims to bridge this gap by taking a sober look at the translation of concepts of environmental sustainability into terms that are meaningful and applicable for cities particularly those in fast developing countries like China Capacity Building in National Environmental Policy Helmut Weidner,Martin Jänicke,2013-03-09 This book is the second collection of systematic case studies describing national environmental policies in 17 countries in terms of capacity building see Appen dix The OECD defines environmental capacity building as a society s ability to identify and solve environmental problems While various institutions including UNEP FAO World Bank and OECD have hitherto used the terms environmental capacity and capacity building almost exclusively with reference to developing countries we have extended the concepts to industrialized countries as well The first collection edited by Martin Janicke Helge Joergens both Free University Berlin and Helmut Weidner Social Science Research Center Berlin was published in 1997 under the title National Environmental Policies A Comparative Study of Capacity Building Berlin etc Springer Verlag It included 13 studies of countries As in the first volume chapter I presents the conceptual framework underlying the national case studies It is a slightly shorter version of the corresponding chapter in volume I The design of all case studies in the two volumes is largely congruent with this conceptual framework Although the various sections of the studies do not always have identical titles and subtitles the central elements of the capacity building approach have been applied in all cases **Global-Regional Linkages in the Earth System** Peter D. Tyson,Roland Fuchs,Congbin Fu,Louis Lebel,Hermine Vloemans,Eric Odada,John Perry,Will Steffen,Hassan Virji,2012-12-06 Global environmental change occupies a central niche in the pantheon of modern sciences There is an urgent need to know and understand the way in which global biogeochemical cycles have changed over different time scales in the past and are likely to do so in the future Equally important it is necessary to determine the extent to which natural variability and that induced by anthropogenic activities are bringing about change A number of international co operative scientific programmes address

these issues Chief among them are the International Geosphere Biosphere Programme IGBP the World Climate Research Programme WCRP and the International Human Dimensions Programme IHDP for global change This book is one of a series of IGBP syntheses drawing together findings in global environmental change over the past decade or so One focus of IGBP activities is the System for Analysis Research and Training START Co sponsored by the WCRP and IHDP START establishes regional research networks for global change science in developing countries stimulates and carries out global change research in developing regions of the world and builds capacity to undertake such research at personal institutional and regional levels Several regional global change networks have been established and much regional research has been accomplished in the last five years or so In this book work relating to four of the older START regions Southern Africa South Asia Southeast Asia and East Asia will be used as case studies to illustrate regional global linkages in Earth System Science

Global Environmental Law at a Crossroads Robert V. Percival, Jolene Lin, William Piermattei, 2014-06-27 This timely volume considers the future of environmental law and governance in the aftermath of the Rio 20 conference An international set of expert contributors begin by addressing a range of governance concepts that can be used to address **Roadmap to Sustainable Textiles and Clothing** Subramanian Senthilkannan Muthu, 2014-10-08 This book covers the elements involved in achieving sustainability in textiles and clothing sector The chapters covered in three volumes of this series title cover all the distinctive areas earmarked for achieving sustainable development in textiles and clothing industry This third volume highlights the areas pertaining to the regulatory aspects and sustainability standards applicable to textiles and clothing supply chain There are various standards earmarked for measuring the environmental impacts and sustainability of textile products There are also plenty of certification schemes available along with the index systems applicable to textile sector Brands and manufactures are also venturing into new developments to achieve sustainable development in textile sector This third volume addresses all these important aspects **Handbook on Trade and the Environment** Kevin

Gallagher, 2010-01-01 Handbook on Trade and the Environment is a good source for those looking for a better understanding of political issues of legal debates and of the state of discussion between government industry NGO and private sector groups on topics that are not often treated elsewhere Judith M Dean World Trade Review I would recommend the book to anyone concerned with the interaction of trade and the environment John Goodier Reference Reviews In this comprehensive reference work Kevin Gallagher has compiled a fresh and broad ranging collection of expert voices commenting on the interdisciplinary field of trade and the environment For over two decades policymakers and scholars have been struggling to understand the relationship between international trade in a globalizing world and its effects on the natural environment The authors in this Handbook provide the tools to do just that The editor's well worked introduction synthesizes the emerging themes of the collection which is divided into three sections trade and environmental quality trade and environmental politics and trade and environmental policy Topics include the extent to which trade liberalization creates pollution havens where

dirty industries flock to poorer countries with lax environmental standards and conversely how multinational corporations bring cleaner environmental technologies to developing countries when they choose to move abroad The volume also addresses the extent to which national environmental policy and or global environmental agreements clash with the emerging rules of the World Trade Organization and whether such environmental policies hinder export competitiveness Finally numerous political economy analyses of the complex political coalitions that arise to adapt to and mitigate changes in trade and environmental policy are provided In addition to broader overviews of the field in depth case studies of nations and regions are offered including the United States the European Union China India and Mexico as well East Asia Latin America and Africa The volume will serve as a guide for scholars new to the field as well as students and policy makers needing a quick reference to the research on the interface between trade and the environment

The Enclave Economy Kevin P. Gallagher, Lyuba Zarsky, 2007-07-20 Analyzes the extent to which foreign investment in Mexico's information technology sector brought economic social and environmental benefits to Guadalajara Foreign investment has been widely perceived as a panacea for developing countries as a way to reduce poverty and kick start sustainable modern industries The Enclave Economy calls this prescription into question showing that Mexico's post NAFTA experience of foreign direct investment in its information technology sector particularly in the Guadalajara region did not result in the expected benefits Charting the rise and fall of Mexico's Silicon Valley the authors explore issues that resonate through much of Latin America and the developing world the social economic and environmental effects of market driven globalization In the 1990s Mexico was a poster child for globalization throwing open its borders to trade and foreign investment embracing NAFTA and ending the government's role in strengthening domestic industry But The Enclave Economy shows that although Mexico was initially successful in attracting multinational corporations foreign investments waned in the absence of active government support and as China became increasingly competitive Moreover the authors find that foreign investment created an enclave economy the benefits of which were confined to an international sector not connected to the wider Mexican economy In fact foreign investment put many local IT firms out of business and transferred only limited amounts of environmentally sound technology The authors suggest policies and strategies that will enable Mexico and other developing countries to foster foreign investment for sustainable development in the future
