Proceedings of the ASME Manufacturing Engineering Division and the ASME Textile Engineering Division --2006 ,2007 **Turbulent Flow Computation** D. Drikakis, Bernard Geurts, 2006-04-11 In various branches of fluid mechanics our understanding is inhibited by the presence of turbulence Although many experimental and theoretical studies have significantly helped to increase our physical understanding a comprehensive and predictive theory of turbulent flows has not yet been established Therefore the prediction of turbulent flow relies heavily on simulation strategies The development of reliable methods for turbulent flow computation will have a significant impact on a variety of technological advancements These range from aircraft and car design to turbomachinery combustors and process engineering Moreover simulation approaches are important in materials sign prediction of biologically relevant flows and also significantly contribute to the understanding of environmental processes including weather and climate forecasting The material that is compiled in this book presents a coherent account of contemporary computational approaches for turbulent flows It aims to provide the reader with information about the current state of the art as well as to stimulate directions for future research and development The book puts particular emphasis on computational methods for incompressible and compressible turbulent flows as well as on methods for analysing and quantifying numerical errors in turbulent flow computations In addition it presents turbulence modelling approaches in the context of large eddy simulation and unfolds the challenges in the field of simulations for multiphase flows and computational fluid dynamics CFD of engineering flows in complex geometries Apart from reviewing main research developments new material is also included in many of the chapters

Energy Efficiency in Motor Systems Peter Radgen, Paolo Bertoldi, 2024-11-06 This book contains selected peer reviewed papers presented at the 12th International Conference on Energy Efficiency in Motor Systems EEMODS 22 held in Stuttgart Germany from May 3 5 2022 As with previous conferences in this series EEMODS 22 provided a scientific forum to discuss and debate the latest developments and impacts of electrical motor systems on energy and the environment energy efficiency policies and programs adopted and planned standards including ISO 50 001 and the technical and commercial advances made in the dissemination and penetration of energy efficient motor systems Topics covered include emerging motor technologies research and innovation in electric motors power electronics and drives pump systems market surveillance and enforcement mechanisms national energy efficiency standards including case studies plus much more The conference is international by nature and aims to attract high quality and innovative contributions from all corners of the globe while the papers facilitate the development of new technologies policies and strategies to increase energy efficiency

Bio-MEMS Wanjun Wang, Steven A. Soper, 2006-12-15 This book considers both the unique characteristics of biological samples and the challenges of microscale engineering Divided into three main sections it first examines fabrication technologies using non silicon processes which are suitable for the materials

more commonly used in medical biological analyses These include UV lithography LIGA nanoimprinting and hot embossing Attention then shifts to microfluidic components and sensing technologies for sample preparation delivery and analysis in microchannels and microchambers The final section outlines various applications and systems at the leading edge of Bio MEMS technology in a variety of areas such as drug delivery and proteomics

Slurry Transport Using Centrifugal Pumps
K. C. Wilson, G. R. Addie, A. Sellgren, R. Clift, 2008-03-28

1 Applications of Slurry Transport Vast tonnages are pumped every year in the form of solid liquid mixtures known as slurries The application which involves the largest quantities is the dredging industry continually maintaining navigation in harbours and rivers altering coastlines and winning material for landfill and construction purposes As a single dredge may be required to maintain a throughput of 7000 tonnes of slurry per hour or more very large centrifugal pumps are used Figures 1 1 and 1 2 show respectively an exterior view of this type of pump and a view of a large dredge pump impeller Addie Helmley 1989 The manufacture of fertiliser is another process involving massive slur transport operations Li Florida phosphate matrix is recovered by huge draglines in open pit mining operations It is then slurried and pumped to the wash plants through pipelines with a typical length of about 10 kilometres Each year some 34 million tonnes of matrix are transported in this manner This industry employs centrifugal pumps that are generally smaller than those used in large dredges but impeller diameters up to 1 4 m are common and drive capacity is often in excess of 1000 kW The transport distance is typically longer than for dredging applications and Chapter 1 Figure LI Testing a dredge pump at the GIW Hydraulic Laboratory Figure 1 2 Impeller for large dredge pump 1 Introduction 3 hence a series of pumping stations is often used Figure 1 3 shows a boost pump installation in a phosphate pipeline

Logistics Management and Optimization through Hybrid Artificial Intelligence Systems Ortiz Zezzatti, Carlos Alberto Ochoa, Chira, Camelia, Hernandez, Arturo, Basurto, Miguel, 2012-03-31 This book offers the latest research within the field of HAIS surveying the broad topics and collecting case studies future directions and cutting edge analyses investigating biologically inspired algorithms such as ant colony optimization and particle swarm optimization
