Methodologies and Approaches** Rasiah Logananthara,Günther Palm,Moonis Ali,2003-07-31 The focus of the papers presented in these proceedings is on employing various methodologies and approaches for solving real life problems Although the mechanisms that the human brain employs to solve problems are not yet completely known we do

have good insight into the functional processing performed by the human mind. On the basis of the understanding of these natural processes, scientists in the field of applied intelligence have developed multiple types of artificial processes and have employed them successfully in solving real life problems. The types of approaches used to solve problems are dependant on both the nature of the problem and the expected outcome. While knowledge based systems are useful for solving problems in well understood domains with relatively stable environments, the approach may fail when the domain knowledge is either not very well understood or changing rapidly. The techniques of data discovery through data mining will help to alleviate some problems faced by knowledge based approaches to solving problems in such domains. Research and development in the area of artificial intelligence are influenced by opportunity needs and the availability of resources. The rapid advancement of Internet technology and the trend of increasing bandwidths provide an opportunity and a need for intelligent information processing, thus creating an excellent opportunity for agent based computations and learning. Over 40% of the papers appearing in the conference proceedings focus on the area of machine learning and intelligent agents, clear evidence of growing interest in this area.

Piping and Pipeline Engineering George A. Antaki, 2003-05-28 Taking a big picture approach, *Piping and Pipeline Engineering: Design, Construction, Maintenance, Integrity and Repair* elucidates the fundamental steps to any successful piping and pipeline engineering project, whether it is routine maintenance or a new multi million dollar project. Analysis of Material Removal Processes Warren R. DeVries, 2012-12-06 Metal removal processes, cutting and grinding, in this book are an integral part of a large number of manufacturing systems, either as the primary manufacturing process or as an important part of preparing the tooling for other manufacturing processes. In recent years, industry and educational institutions have concentrated on the metal removal system, perhaps at the expense of the process. This book concentrates on metal removal processes, particularly on the modeling aspects that can either give a direct answer or suggest the general requirements as to how to control, improve, or change a metal removal process. This modeling knowledge is more important with automated computer controlled systems than it has ever been before, because quantitative knowledge is needed to design and operate these systems. This senior undergraduate/graduate textbook is aimed at providing the quantitative knowledge, often times at an elementary level, for handling the technological aspects of setting up and operating a metal removal process and interpreting the experience of planning, operating, and improving a metal removal process based on rule of thumb approaches.

Synthesis of Subsonic Airplane Design E. Torenbeek, 2013-06-29 Since the education of aeronautical engineers at Delft University of Technology started in 1940 under the inspiring leadership of Professor H. J. van der Maas, much emphasis has been placed on the design of aircraft as part of the student's curriculum. Not only is aircraft design an optional subject for thesis work, but every aeronautical student has to carry out a preliminary airplane design in the course of his study. The main purpose of this

preliminary design work is to enable the student to synthesize the knowledge obtained separately in courses on aerodynamics aircraft performances stability and control aircraft structures etc The student's exercises in preliminary design have been directed through the years by a number of staff members of the Department of Aerospace Engineering in Delft The author of this book Mr E Torenbeek has made a large contribution to this part of the study programme for many years Not only has he acquired vast experience in teaching airplane design at university level but he has also been deeply involved in design oriented research e.g. developing rational design methods and systematizing design information I am very pleased that this wealth of experience methods and data is now presented in this book
