Abstract. *The diversity and complexity of human settlements is reflected in the range of ways we try to understand them. The richness of subject matter presented by cities has given rise to an equal richness in methods of investigation. Even within a single field such as urban morphology, there are different approaches with different terms of reference. The challenge raised by the diversity is not how to select between the different views but how to combine and co-ordinate them. The purpose of this paper is to undertake an initial critical analysis of different approaches to urban morphology in an effort to meet that challenge. The first aim is to identify the range of different phenomena taken as the object of urban morphological enquiry. The second is to identify an aspect that is common to all the approaches and that can be used as a reference key to co-ordinate different views in a rigorous way. The ultimate goal is a composite view in which the different approaches support each other to provide a better understanding of human settlements.*

Key Words: urban form, spatial analysis, space syntax, process typology, historico-geographical approach

It might be said that the gamut of human civilization is condensed within the urban. Villages, towns and cities present a density and richness of subjects that is hard to find in any other human product. That richness is evident not only in the wide diversity of settlements and the depth of their complexity but also in terms of our capacity to identify and select different aspects to explain.

Just as settlements are diverse and complex, so there are many ways to describe and understand them. To only touch the surface, approaches range across the broad categories of social, economic and environmental and focus variously on the statistical, spatial/geographical, formal, historical, psychological, informational and aesthetic dimensions. Even within a particular area of interest, there are

commonly a number of different approaches focusing on the same thing.

So, if we acknowledge that human settlements are diverse and multi-faceted, we should not be seduced by the superficial attractions of a single point of view. And to acknowledge the wide range of methods should not put us on a tower of Babel, deaf to the voices of others. Rather it should place us at the confluence of routes radiating out to the different regions of the world. This is particularly true of the morphological approach which, as originally conceived by Goethe, should be an independent study that makes use of the findings of all the other sciences, co-ordinating them under the unifying aspect of form (Wilkinson, 1962, pp. 177-8).
