Aspects Of Oral Molecular Biology:

Aspects of Oral Molecular Biology D. B. Ferguson, 1991-02-08 Developmental Aspects of Oral Biology Harold C. Slavkin, Lucien A. Bavetta, 2013-10-22 Developmental Aspects of Oral Biology assembles within one volume selected contributions from highly competent investigators currently engaged in research on developmental problems in oral tissues. The primary objective of this book is to facilitate rapid and lucid communication among researcher, teacher, student, and the practitioner interested in oral tissues and oral diseases. This is best accomplished by providing critical surveys of discussions of the state of knowledge or concepts in relevant areas of biology that relate to development: development in terms of embryogenesis, prenatal growth and development, maturation, senescence, and developmental aberrations which manifest themselves as oral pathology. The book begins with a study on the nutritional aspects of embryogenesis. Separate chapters then cover the molecular biology of developing systems, immunological determinants in development, and the migration, interaction, and early differentiation of orofacial tissues. Subsequent chapters deal with topics such as the development of the primary and secondary palate and the taste buds, tissue interaction during *in vitro* odontogenesis, matrix development in mineralizing tissues, and macromolecular interactions in the connective tissues of the periodontium. **Current**

Research Awards Index, 1989 **Mineralized Tissues in Oral and Craniofacial Science** Laurie K. McCauley, Martha J. Somerman, 2012-06-05 Mineralized Tissues in Oral and Craniofacial Science is a major comprehensive update on knowledge in the field of mineralized tissues in the oral and craniofacial region. Drs. McCauley and Somerman assembled an international team of researchers and clinicians offering a global perspective on the current knowledge in this field. Basic and clinical correlates reinforce the significance of research to clinical diagnoses and therapies, written in a manner that lends easily to their use for case study teaching venues. Section 1 features the many aspects of bone in the craniofacial region, including embryology, cell biology, and stem cell biology. Section 2 focuses on teeth: tooth development, dentin, enamel, cementum, and tooth regeneration. Section 3 discusses the interaction between bones and teeth, including those associated with inflammatory processes, periodontal ligaments, biomechanics, and other impact factors such as nutrition, metabolic bone diseases, and therapeutic modalities. The novel approach of linking the

basic principles of the cell and molecular biology of hard tissues to clinical correlates will appeal to readers at all levels of their research careers both students and faculty faculty interested in a comprehensive text for reference and clinicians interested in the biologic aspects of bones and teeth **Biomedical Index to PHS-supported Research: pt.
