Some Aspects of Composition Richard A. Eveleth, 1955 *Metalevel Architectures and Separation of Crosscutting Concerns* Akinori Yonezawa, Satoshi Matsuoka, 2003-06-30 This volume constitutes the proceedings of REFLECTION 2001 the Third International Conference on Metalevel Architectures and Separation of Crosscutting Concerns which was held in Kyoto September 25-28 2001 Metalevel architectures and reflection have drawn the attention of researchers and practitioners throughout computer science Reflective and metalevel techniques are being used to address real world problems in such areas as programming languages operating systems databases distributed computing expert systems and web computing Separation of concerns has been a guiding principle of software engineering for nearly 30 years but its known benefits are seldom fully achieved in practice This is primarily because traditional mechanisms are not powerful enough to handle many kinds of concerns that occur in practice Over the last 10 years to overcome the limitations of traditional frameworks many researchers including several from the reflection community have proposed new approaches For the first time papers on advanced approaches to separation of concerns were explicitly solicited Following the success of previous conferences such as IMSA 92 in Tokyo Reflection 96 in San Francisco and Reflection 99 in Saint Malo we hope that the conference provided an excellent forum for researchers with a broad range of interests in metalevel architectures reflective techniques and separation of concerns in general

Proceedings of the 9th Workshop on Aspects, Components, and Patterns for Infrastructure Software (ACP4IS '10) Bram Adams, Michael Haupt, Daniel Lohmann, 2010 Aspect oriented programming component models and design patterns are modern and actively evolving techniques for improving the modularization of complex software In particular these techniques hold great promise for the development of systems infrastructure software e.g application servers middleware virtual machines compilers operating systems and other software that provides general services for higher level applications The developers of infrastructure software are faced with increasing demands from application programmers needing higher level support for application development Meeting these demands requires careful use of software modularization techniques since infrastructural concerns are notoriously hard to modularize Aspects components and patterns provide very different means to deal with infrastructure software but despite their differences they have much in common For instance component models try to free the developer from the need to deal directly with services like security or transactions These are primary examples of crosscutting concerns and modularizing such concerns are the main target of aspect oriented languages Similarly design

patterns like Visitor and Interceptor facilitate the clean modularization of otherwise tangled concerns Building on the ACP4IS meetings at AOSD 2002 2009 this workshop aims to provide a highly interactive forum for researchers and developers to discuss the application of and relationships between aspects components and patterns within modern infrastructure software The goal is to put aspects components and patterns into a common reference frame and to build connections between the software engineering and systems communities

Software Composition Cesare Pautasso,Éric Tanter,2008-03-17 The goal of the International Symposia on Software Composition is to advance the state of the research in component based software development We focus on the challenges related to component development reuse verification and of course composition Software composition is becoming more and more important as innovation in software engineering shifts from the development of individual components to their reuse and recombination in novel ways To this end for the 2008 edition researchers were solicited to contribute on topics related to component adaptation techniques composition languages calculi and type systems as well as emerging composition techniques such as aspect oriented programming service oriented architectures and mashups In line with previous editions of SC contributions were sought focusing on both theory and practice with a particular interest in efforts relating them This LNCS volume contains the proceedings of the 7th International Symposium on Software Composition which was held on March 29 30 2008 as a satellite event of the European Joint Conferences on Theory and Practice of Software ETAPS in Budapest Hungary We received 90 initial submissions from all over the world out of which 70 were considered for evaluation by a Program Committee consisting of 30 international experts Among these submissions we selected 13 long papers and 6 short papers to be included in the proceedings and presented at the conference Each paper went through a thorough revision process and was reviewed by three to five reviewers This ensured the necessary quality for publishing these proceedings in time for the event a first in the history of the symposium

Transactions on Aspect-Oriented Software Development VI Robert B. France, Shmuel Katz, Harold Ossher, Jean-Marc Jezequel, 2009-10-26 work for small problems but it introduces significant accidental complexities when tackling larger problems

Notethattherealchallengehereisnohowtodesignthesystemtotakeap ticular aspect into account there is significant design know how in industry on this and it is often captured in the form of design patterns Taking into account more than one aspect can be a little harder but many large scale successful projects in industry provide some evidence that engineers know how different concerns should be handled The real challenge is reducing the effort that the engineer has to expend when grappling with many inter dependent concerns For example in a product line context when an engineer wants to replace a variant of an aspect used in a system she should be able to do this cheaply quickly and safely Manually weaving every aspect is not an option Unlike many models used in the sciences models in software and in linguistics have the same nature as the things they model In software this provides an opportunity to automatically derive software from its model that is to automate the weaving process This requires models to be formal and the weaving process be described as a program i e an executable meta model manipulating models to produce a detailed design The detailed design produced by the weaving process can ultimately be transformed to code or at least test suites

Aspect-Oriented Requirements Engineering Ana Moreira, Ruzanna Chitchyan, João Araújo, Awais Rashid, 2013-11-19 Broadly scoped requirements such as security privacy and response time are a major source of complexity in modern software systems This is due to their tangled inter relationships with and effects on other requirements Aspect Oriented Requirements Engineering AORE aims to facilitate modularisation of such broadly scoped requirements so that software developers are able to reason about them in isolation one at a time AORE also captures these inter relationships and effects in well defined composition specifications and in so doing exposes the

causes for potential conflicts trade offs and roots for the key early architectural decisions Over the last decade significant work has been carried out in the field of AORE With this book the editors aim to provide a consolidated overview of these efforts and results The individual contributions discuss how aspects can be identified represented composed and reasoned about as well as how they are used in specific domains and in industry Thus the book does not present one particular AORE approach but conveys a broad understanding of the aspect oriented perspective on requirements engineering The chapters are organized into five sections concern identification in requirements concern modelling and composition domain specific use of AORE aspect interactions and AORE in industry This book provides readers with the most comprehensive coverage of AORE and the capabilities it offers to those grappling with the complexity arising from broadly scoped requirements a phenomenon that is without doubt universal across software systems Software engineers and related professionals in industry as well as advanced undergraduate and post graduate students and researchers will benefit from these comprehensive descriptions and the industrial case studies
