Van Sorge,2022-12-06 **Tutorials on Motion Perception** Alexander H. Wertheim,2012-12-06 From August 24 29 1980 the international Symposium on the Study of Motion Perception Recent Developments and Applications sponsored by NATO and organized by the editors of this book was held in Veldhoven the Netherlands The meeting was attended by about eighty scholars including psychologists neurologists physicists and other scientists from fourteen different countries During the symposium some fifty research papers were presented and a series of tutorial review papers were read and discussed The research presentations have been published in a special issue of the international journal of psychonomics Acta Psychologica Vol 48 1981 The present book is a compilation of the tutorial papers The tutorials were arranged around early versions of the chapters now appearing in this book The long discussions at the Veldhoven tutorial sessions resulted in extensive revisions of the texts prior to this publication Unfortunately this led to a delay in publication but we feel that this was justified by a greater depth of understanding which in our opinion has significantly increased the quality of the book As they now stand the chapters cover most of the issues relevant to the study of motion perception Also they clearly reflect the intensive exchange of knowledge that took place during the symposium As such we think that this book can be used both as an advanced text for students and scientists alike and as a comprehensive reference source **The Psychology of Cognition** Durk

Visual Cognition Glyn W. Humphreys, Vicki Bruce, 2021-12-24 Vision allows us to do many things It enables us to perceive a world composed of meaningful objects and events It enables us to track those events as they take place in front of our eyes It enables us to read It provides accurate spatial information for actions such as reaching for or avoiding objects It provides colour and texture that can help us to separate objects from their background and so forth This book is concerned with understanding the processes that allow us to carry out these various visually driven behaviours In the past ten years our understanding of visual processing has undergone a rapid change primarily fostered by the convergence of computational experimental and neuropsychological work on the topic Visual Cognition provides the first major attempt to cover all aspects of this work within a single text It provides a summary of research on visual information processing relevant to advanced undergraduates postgraduates and research workers It covers seeing static forms object recognition dynamic vision motion perception and visual masking visual attention visual memory visual aspects of reading For each topic the relevant computational experimental and neuropsychological work is integrated to provide a broader coverage than that of other texts

Cognitive Functioning in Schizophrenia: Leveraging the RDoC Framework Deanna M. Barch, Jared W. initiatives Visual Prosthetics Gislin Dagnelie, 2011-02-19 Visual Prosthetics provides an in depth analysis of the principles of operation current state anticipated developments and functional aspects of visual prosthetics restoring sight to visually impaired individuals This volume uniquely describes the human visual system in health and disease in a pedagogical and didactic manner fitting to professionals and researchers with a bioengineering background Readers will find a balanced overview of electrical molecular chemical and synthetic chromophore stimulation in addition to the biophysics and psychological aspects of vision restoration Unlike competitive texts this introduction also includes the need and methods for functional evaluation and rehabilitation Professionals in the field of biomedical engineering and graduate and postgraduate researchers will find Visual Prosthetics a valuable reference **Awareness shaping or shaped by prediction and postdiction** Yuki Yamada, Takahiro Kawabe, 2015-06-08 We intuitively believe that we are aware of the external world as it is Unfortunately this is not entirely true In fact the capacity of our sensory system is too small to veridically perceive the world To overcome this problem the sensory system has to spatiotemporally integrate neural signals in order to interpret the external world However the spatiotemporal integration involves severe neural latencies How does the sensory system keep up with the ever changing external world As later discussed prediction and postdiction are essential keywords here For example the sensory system uses temporally preceding events to predict subsequent events e g Nijhawan 1994 Kerzel 2003 Hubbard 2005 even when the preceding event is subliminally presented Schmidt 2000 Moreover internal prediction modulates the perception of action outcomes Bays et al 2005 Cardoso Leite et al 2010 and sense of agency Wenke et al 2010 Prediction is also an indispensable factor for movement planning and control Kawato 1999 On the other hand the sensory system also makes use of subsequent events to postdictively interpret a preceding event e g Eagleman Enns 2002 Khuu et al 2010 Kawabe 2011 2012 Miyazaki et al 2010 Ono Lau et al 2007 How prediction and postdiction shape awareness of the external world is an intriguing question Prediction is involved with the encoding of incoming signals whereas postdiction is related to a re interpretation of already encoded signals Given this perspective prediction and postdiction may exist along a processing stream for a single external event However it is unclear whether and if so how prediction and postdiction interact with each other to shape awareness of the external world Awareness of the external world may also shape prediction and or postdiction It is plausible that awareness of the external world drives the prediction and postdiction of future and past appearances of the world However the literature provides little information about the role of awareness of the external world in prediction and postdiction This background propelled us to propose this research topic with the aim of offering a space for systematic discussion concerning the relationship between awareness prediction and postdiction among researchers in broad research areas such as psychology psychophysics neuroscience cognitive science philosophy and so forth We encouraged papers that address one or more of the following questions 1 How does prediction shape awareness of the external world 2 How does postdiction shape awareness of the external world 3 How do prediction and postdiction interact with each other in

shaping awareness of the external world 4 How does awareness of the external world shape prediction postdiction
