Aspects Prospects Of Theoretical Compu:

Algebraic System Specification and Development Michel Bidoit, 1991-06-26 Methods for the algebraic specification of abstract data types were proposed in the early 1970s in the USA and Canada and became a major research issue in Europe shortly afterwards Since then the algebraic approach has come to play a central role in research on formal specification and development as its range of applications was extended to the specification of complete software systems to the formal description of the program development process and to the uniform definition of syntax and semantics of programming languages Today this approach extends beyond just software to the development of integrated hardware and software systems These flourishing activities in the area of algebraic specifications have led to an abundance of approaches theories and concepts which have universal algebra category theory and logic as a common mathematical basis This volume is an annotated bibliography which provides an up to date overview of past and present work on algebraic specification No attempt is made to provide a coherent introduction to the topic for beginners the intention is rather to provide a guide to the current literature for researchers in algebraic specification and neighboring fields Some indications of how the different approaches are related are included together with some ideas concerning possible future directions

Pocket Machining Martin Held, 1991-06-12 In this monograph the author presents a thorough computational geometry approach to handling theoretical and practical problems arising from numerically controlled pocket machining The approach unifies two scientific disciplines computational geometry and mechanical engineering Topics of practical importance that are dealt with include the selection of tool sizes the determination of tool paths and the optimization of tool paths Full details of the algorithms are given from a practical point of view including information on implementation issues This practice minded approach is embedded in a rigorous theoretical framework enabling concise statement of definitions and proof of the correctness and efficiency of the algorithms In particular the construction of Voronoi diagrams and their use for offset calculations are investigated in great detail Based on Voronoi diagrams a graph like structure is introduced that serves as a high level abstraction of the pocket geometry and provides the basis for algorithmically performing shape interrogation and path planning tasks Finally the efficiency and robustness of the approach is illustrated with figures showing pocketing examples that have been processed by the author's own implementation

Schmidt,1991-06-26 Currently the field of information systems technology is rapidly extending into several dimensions There is the semantic dimension including object orientation data deduction and extended knowledge representation schemes there is improved systems integration and there are new tools All these extensions aim to provide semantically richer and better engineered information systems that allow for more adequate and complete representations and thus extend the effective use of database technology to a wider class of applications Database researchers and developers whether they are committed to application or to system construction are convinced that next generation information system technology will be heavily determined by a handful of new concepts that they have to understand and work out in detail now This volume concentrates on the following topics Extended data types and data models database programming languages Rule based data deduction expert systems knowledge bases Object orientation and semantic data modelling DB application development methodologies and tools Interface technology parallelism interoperability New database applications Computer Science Logic Egon Börger,Hans Kleine Büning,Michael M. Programming Language Implementation and Logic Programming Jan Małuszyński, Martin Wirsing, 1991-08-14 This volume contains the papers which have been accepted for presentation at the Third International Symposium on Programming Language Implementation and Logic Programming PLILP 91 held in Passau Germany August 26-28 1991 The aim of the symposium was to explore new declarative concepts methods and techniques relevant for the implementation of all kinds of programming languages whether algorithmic or declarative ones The intention was to gather researchers from the fields of algorithmic programming languages as well as logic functional and object oriented programming This volume contains the two invited talks given at the symposium by H Ait Kaci and D B MacQueen 32 selected papers and abstracts of several system demonstrations The proceedings of PLILP 88 and PLILP 90 are available as Lecture Notes in Computer Science Volumes 348 and 456

Applied Algebra, Algebraic Algorithms and Error-Correcting Codes Shojiro Sakata, 1991-07-10 The AAEC conferences focus on the algebraic aspects of modern computer science which include the most up to date and advanced topics The topic of error correcting codes is one where theory and implementation are unified into a subject both of mathematical beauty and of practical importance Algebraic algorithms are not only interesting theoretically but also important in computer and communication engineering and many other fields This volume contains the proceedings of the 8th AAEC conference held in Tokyo in August 1990 Researchers from Europe America Japan and other regions of the world presented papers at the conference The papers present new results of recent theoretical and application oriented research on applied algebra algebraic algorithms

and error correcting codes Computer-Aided Verification Edmund M. Clarke, Robert P. Kurshan, 1991-10-02 This volume contains the proceedings of the second workshop on Computer Aided Verification held at DIMACS Rutgers University June 18-21 1990. It features theoretical results that lead to new or more powerful verification methods. Among these are advances in the use of binary decision diagrams, dense time reductions based upon partial order representations and proof checking in controller verification. The motivation for holding a workshop on computer aided verification was to bring together work on effective algorithms or methodologies for formal verification as distinguished say from attributes of logics or formal languages. The considerable interest generated by the first workshop held in Grenoble June 1989 (see LNCS 407) prompted this second meeting. The general focus of this volume is on the problem of making formal verification feasible for various models of computation. Specific emphasis is on models associated with distributed programs, protocols and digital circuits. The general test of algorithm feasibility is to embed it into a verification tool and exercise that tool on realistic examples. The workshop included sessions for the demonstration of new verification tools.

CONCUR '91 Jos C.M. Baeten, 1991-08-14
CONCUR 91 is the second international conference on concurrency theory organized in association with the NFI project Transfer. It is a sequel to the CONCUR 90 conference. Its basic aim is to communicate ongoing work in concurrency theory. This proceedings volume contains 30 papers selected for presentation at the conference from 71 submitted together with four invited papers and abstracts of the other invited papers. The papers are organized into sections on process algebras, logics and model checking, applications and specification languages, models and net theory, design and real time tools and probabilities and programming languages. The proceedings of CONCUR 90 are available as Volume 458 of Lecture Notes in Computer Science.
